

# ChinaAMC Select Asia Bond Fund

## Fund Factsheet

As of 31 Oct 2023

37/F, Bank of China Tower, 1 Garden Road, Hong Kong

Investment involves risks, including the loss of principal. The price of units or shares of the Funds may go up as well as down. Past performance is not indicative of future results. The value of the Funds can be extremely volatile and could go down substantially within a short period of time. You should read the Fund's Placing Memorandum or Explanatory Memorandum and Product Key Facts Statement for details, including risk factors. Investors should not base investment decisions on this marketing material alone. Please note:

- The Investment in debt instruments involves volatility and liquidity risk, credit risk, interest rate risk, credit rating risk, valuation risk, downgrade risk and sovereign debt risk. Fixed income and debt instruments which are below investment grade or unrated are subject to lower liquidity, higher volatility, higher credit risk and greater risk of loss of principal and interest than more highly-rated debt instruments.
- Investments in Asian (such as the PRC) market involves concentration risk. The Fund is likely to be more volatile than a fund having a more diverse portfolio of investments and its value may be more susceptible to adverse economic, political, policy, foreign exchange, liquidity, tax, legal or regulatory event affecting the Asian market.
- Investments in emerging market involves increased risks and special considerations not typically associated with investment in more developed markets, such as liquidity risks, currency risks, political and economic uncertainties, legal and taxation risks, settlement risks, custody risk and the likelihood of a high degree of volatility.
- Some classes of the Fund are denominated and settled in RMB; subscription and redemption must be made in RMB. RMB is not freely convertible and is subject to exchange controls and restrictions. There is no guarantee that RMB will not depreciate. Any depreciation of RMB could adversely affect the value of investors' investments in the Fund. Under exceptional circumstances, payment of redemptions and/or dividend payment in RMB may be delayed due to the exchange controls and restrictions applicable to RMB.
- In respect of the distribution units for the Fund, the Manager currently intends to make monthly dividend distribution. Distribution may be paid out of capital or effectively paid out of capital amounts to a return or withdrawal of part of a unitholder's original investment or from any capital gains attributable to that original investment, which may result in an immediate reduction of the net asset value per unit.

### ▲ Investment Objective

The Fund seeks to achieve long term return by investing primarily (i.e. not less than 70% of the net asset value of the Fund) in fixed income and debt instruments issued or guaranteed by issuers domiciled in Asia and whose predominant business, in the opinion of the Manager, will benefit from or is related to the economic growth in Asia.

<sup>1</sup>Past performance information is not indicative of future performance. Investors may not get back the full amount invested. The computation basis of the performance is calculated on NAV-to-NAV, with dividend reinvested. With effect from 15 May 2020, the investment strategy of the Fund was changed. The performance of the Fund prior to 15 May 2020 was achieved under circumstances that no longer apply. The investment objective and strategy of the Fund was also changed on 10 March 2020, 6 December 2019 and 26 January 2018 respectively.

<sup>2</sup>Please refer to the Fund's prospectus for further details (including fees).

<sup>3</sup>Calculated since the inception date of each respective share class.

<sup>4</sup>Calculated with the weighted average of median yield to maturity of each holding.

#### Geographical Exposure (%)

### ▲ Manager's Comment

The global markets experienced sustained high volatility in October. The escalation of tensions in the early part of the month due to the Israeli-Palestinian conflict disrupted risk sentiment, while the easing of tensions in US-China relations towards the end of the month provided some support to asset prices. The focus of the market remained on US bond yields, strong economic data, and signs of resurging inflation, which put pressure on US bonds from a fundamental perspective. Factors such as supply and demand dynamics, position unwinding, and asset correlations amplifying the extent of rate increases contributed to the 10-year US Treasury yield briefly surpassing 5%. With debt issuance plans lower than expected and the Federal Reserve officially considering financial conditions in policy considerations, the possibility of a rapid rise in short-term US bond yields has decreased. However, the probability of a unilateral decrease in rates is limited until there is a clear sign of a significant economic downturn. The volatile US bond market presents both opportunities and challenges. The effectiveness of China's property stimulus measures in early September turned out to be different from what many had anticipated. Short-term sentiment in the real estate sector reached extreme pessimism, while the long-term outlook for the industry is still finding a bottom. The increase in refinancing bonds and the deficit ratio temporarily alleviated the pressure on local government debt, but long-term uncertainties remain. Despite the short-term economic recovery in China, there are lingering doubts about its long-term sustainability. Although Japan did not make significant adjustments to its Yield Curve Control (YCC) policy, market expectations for such adjustments were strong. Other emerging markets have a relatively positive long-term development outlook, but the higher interest rates by the Federal Reserve will still put short-term pressure on them. Overall, a barbell strategy will continue to be maintained, with short-duration high-yield bonds and periodic allocation of long-duration high-yield bonds serving as potential sources of possible excess returns.
