

ChinaAMC Select Fixed Income Allocation Fund

Fund Factsheet

As of 31 Oct 2022

37/F, Bank of China Tower, 1 Garden Road, Hong Kong

Investment involves risks, including the loss of principal. The price of units or shares of the Funds may go up as well as down. Past performance is not indicative of future results. The value of the Funds can be extremely volatile and could go down substantially within a short period of time. You should read the Fund's Placing Memorandum or Explanatory Memorandum and Product Key Facts Statement for details, including risk factors. Investors should not base investment decisions on this marketing material alone. Please note:

- ChinaAMC Select Fixed Income Allocation Fund (the "Fund") seeks to achieve capital appreciation by investing not less than 70% of the NAV in fixed income and debt instruments in markets worldwide.
- Investment in debt instruments involves volatility and liquidity risk, credit risk, interest rate risk, credit rating risk, valuation risk, downgrade risk and sovereign debt risk. Fixed income and debt instruments which are below investment grade or unrated are subject to lower liquidity, higher volatility, higher credit risk and greater risk of loss.
- Investment in short-term debt instruments are not risk-free. The turnover rates of the Fund's investments may be relatively high, as such the transaction costs incurred by the Fund will increase.
- RMB is not freely convertible and is subject to exchange controls and restrictions. There is no guarantee that the value of RMB against the investor's base currencies will not depreciate. Any depreciation of RMB could adversely affect the value of investors' investments in the Fund. Payment of redemptions and/or dividend in RMB may be delayed due to exchange controls and restrictions.
- Certain investments acquired by the Fund are denominated in currencies different from the Base Currency. The NAV of the Fund may be affected by exchange rates and by changes in exchange rate control.
- The Fund may acquire FDIs and may invest in structured notes for hedging purpose. The price of a derivative instrument can be very volatile and involves counterparty risk. Structured notes are complex, illiquid and there are risks of mispricing or improper valuation. They may not always perfectly track the value of the securities, rates or indices they are designed to track. Besides, structured notes are subject to insolvency or default risk of the issuers and usually involve an embedded leverage, so a relatively small adverse market movement could expose the Fund to an exceeded loss. In adverse situations, such hedging may become ineffective.
- The Fund may invest in other funds and additional fees may involve. There can be no assurance that 1) the liquidity of the underlying funds will always be sufficient to meet redemption requests; and 2) investment objective and strategy of the underlying funds will be successfully achieved.

▲ Investment Objective

The Fund seeks to achieve capital appreciation by directly or indirectly investing not less than 70% of the Net Asset Value of the Fund in fixed income and debt instruments in markets worldwide.

▲ Manager's Comment

In October, the market still maintained high volatility in the face of many uncertainties, and different markets showed great differentiation. In the first half of the month, U.S. employment and inflation data continued to exceed market expectations, and the interest rate and duration of interest rate hikes continued to rise to 4.34%. In the second half of the month, the market made some corrections to the early overreaction, and developed markets rebounded to a certain extent, while the outflow of foreign capital from China continued to put pressure on Chinese assets. In terms of credit bonds, developed markets outperformed emerging markets, while Chinese capital significantly lags behind. LGFV and non-bank financial sectors weaken. After the 20th National Congress of the Communist Party of China, the sentiment in the real estate sector continued to be sluggish and prices continued to drop significantly. The portfolio further reduces the proportion of long-term bonds with expensive credit spread valuations, reduces portfolio volatility and improves the certainty of returns, and selects opportunities to participate in Tier 1 newly issued bonds.
