

# ChinaAMC Select Fixed Income Allocation Fund

## Fund Factsheet

As of 29 Dec 2023

37/F, Bank of China Tower, 1 Garden Road, Hong Kong

Investment involves risks, including the loss of principal. The price of units or shares of the Funds may go up as well as down. Past performance is not indicative of future results. The value of the Funds can be extremely volatile and could go down substantially within a short period of time. You should read the Fund's Placing Memorandum or Explanatory Memorandum and Product Key Facts Statement for details, including risk factors. Investors should not base investment decisions on this marketing material alone. Please note:

- ChinaAMC Select Fixed Income Allocation Fund (the "Fund") seeks to achieve capital appreciation by investing not less than 70% of the NAV in fixed income and debt instruments in markets worldwide.
- Investment in debt instruments involves volatility and liquidity risk, credit risk, interest rate risk, credit rating risk, valuation risk, downgrade risk and sovereign debt risk. Fixed income and debt instruments which are below investment grade or unrated are subject to lower liquidity, higher volatility, higher credit risk and greater risk of loss.
- Investment in short-term debt instruments are not risk-free. The turnover rates of the Fund's investments may be relatively high, as such the transaction costs incurred by the Fund will increase.
- RMB is not freely convertible and is subject to exchange controls and restrictions. There is no guarantee that the value of RMB against the investor's base currencies will not depreciate. Any depreciation of RMB could adversely affect the value of investors' investments in the Fund. Payment of redemptions and/or dividend in RMB may be delayed due to exchange controls and restrictions.
- Certain investments acquired by the Fund are denominated in currencies different from the Base Currency. The NAV of the Fund may be affected by exchange rates and by changes in exchange rate control.
- The Fund may acquire FDIs and may invest in structured notes for hedging purpose. The price of a derivative instrument can be very volatile and involves counterparty risk. Structured notes are complex, illiquid and there are risks of mispricing or improper valuation. They may not always perfectly track the value of the securities, rates or indices they are designed to track. Besides, structured notes are subject to insolvency or default risk of the issuers and usually involve an embedded leverage, so a relatively small adverse market movement could expose the Fund to an exceeded loss. In adverse situations, such hedging may become ineffective.
- The Fund may invest in other funds and additional fees may involve. There can be no assurance that 1) the liquidity of the underlying funds will always be sufficient to meet redemption requests; and 2) investment objective and strategy of the underlying funds will be successfully achieved.

### ▲ Investment Objective

The Fund seeks to achieve capital appreciation by directly or indirectly investing not less than 70% of the Net Asset Value of the Fund in fixed income and debt instruments in markets worldwide.

## Fund Factsheet

### ▲ Portfolio Allocation

#### Sector Exposure (%)

#### Geographical Exposure (%)

### ▲ Manager's Comment

In December, against the backdrop of interest rate cuts, risk assets continued to rise. The unexpected dovish turn by the Federal Reserve further pushed down the starting point for interest rate pricing. US bond yields further declined, and global credit spreads narrowed to the lowest point of the year. The global investment-grade credit index rose by 100% in the last two months. The current risk premium on assets is extremely low, reflecting the market's relatively optimistic expectations for the economy and corporate earnings. In this context, there is a need to be relatively cautious about adjusting previous trading strategies, but the overall performance of major fixed-income assets in the interest rate-cutting cycle is still expected to be positive for the year. As interest rate expectations rise, it is advisable to slightly extend the portfolio's duration to lock in yields. It is also recommended to avoid high-yield bonds to mitigate the risks of economic downturn and weakening corporate fundamentals. It is important to maintain a diversified allocation across countries.
