## Fund Factsheet

As of 30 Nov 2022

37/F, Bank of China Tower, 1 Garden Road, Hong Kong

Investment involves risks, including the loss of principal. The price of units or shares of the Funds may go up as well as down. Past performance is not indicative of future results. The value of the Funds can be extremely volatile and could go down substantially within a short period of time. You should read the Fund's Placing Memorandum or Explanatory Memorandum and Product Key Facts Statement for details, including risk factors. Investors should not base investment decisions on this marketing material alone. Please note:

- The Fund seeks to take investment exposure to companies in or have significant business exposure to China. Investment in China-related companies and in Chinese markets may involve (i) heightened political, tax, economic, foreign exchange, liquidity and regulatory (including the QFII policy) risks, compared to more developed economies or markets; and (ii) concentration risk which may result in greater volatility than broad-based investments. The China A Share market is also unstable, subject to risks of stock suspension, government intervention and foreign investment restrictions.
- The Fund will obtain exposure to the A Share market, partly or fully by investing into access products and will be exposed to the counterparty risk of the issuer of the access products. The availability of access products is limited by applicable regulations in China, and as a result the cost of investment is subject to market supply and demand forces. Where the supply is low relative to the demand, acquiring access products may involve a higher cost or a premium.
- The Fund is subject to risks associated with the Stock Connect, such as change of relevant rules and regulations, quota limitations, suspension of the Stock Connect and information technology limitation. In the event that the Fund's ability to invest in A Shares through the Stock Connect on a timely basis is adversely affected, the Manager will rely on A Share access products investment.
- The Fund will invest in A Share ETFs and is subject to the fees and charges and the risk of tracking errors of the relevant A Share ETFs. If the Fund invests in synthetic ETFs, it will also subject to risks related to derivative instruments.
- There are risks and uncertainties associated with the current PRC tax laws, regulations and practices in respect of capital gains (which may have retrospective effect). Possible changes on the actual applicable tax rates imposed by the SAT and possible expiration of the current exemption of corporate income tax on capital gains may increase the Fund's tax liability and adversely affect the Fund's NAV.
- The Fund will hold investments denominated in currencies different to the base currency of the Fund, meaning the Fund will be at risk to adverse movements in the foreign currency rates.

### ▲ Investment Objective

The Fund seeks to provide investors with long term capital growth through exposure to China-related companies by investing in equities and equity related instruments.

## Fund Factsheet

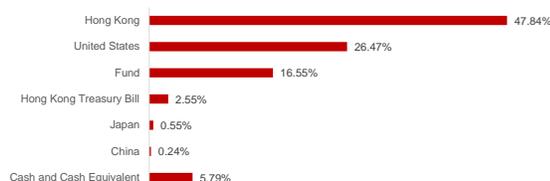

### ▲ Portfolio Allocation

#### Sector Exposure (%)

#### Geographical Exposure (%)

### ▲ Manager's Comment

In November, the fund recorded a positive return of 17.59% this month, the Hang Seng Index rose 26.62%, and Hong Kong stocks bottomed out in November. On November 10, the Standing Committee of the Political Bureau of the Central Committee held a meeting to hear a report on the prevention and control of Covid, and deployed 20 measures to further optimize the prevention and control work. The statement puts more emphasis on "minimizing the impact of the Covid on economic and social development", "adhering to scientific and precise prevention and control", and "correcting the "one-size-fits-all" approach of "overweighting each level" and so on. Positive changes have taken place in the Covid prevention policy. Then China continued to optimize the epidemic prevention and control measures, and Shenzhen and other places optimized and adjusted the prevention and control measures according to the "Twenty Measures". With the introduction of more optimization measures for Covid prevention and control, industries related to the reopening of the economy such as catering and tourism have risen sharply, and industries such as the Internet, technology, and automobiles have also performed well in the upward market. The "third arrow" of the real estate industry has landed, financial institutions have significantly increased their support for real estate companies, and formed a multi-dimensional financing support system for real estate companies such as credit, bonds, equity financing, and pre-sale funds. Real estate, property, and finance and related companies in the real estate chain have strengthened substantially.

After the optimization of Covid prevention and control policies and the sharp rise in the market, investors have consistently expected for the reopening of the Chinese economy. The progress and whether the prevention and control policies are further adjusted will have an impact on the short-term market trend. Considering the high uncertainty of the above-mentioned influencing factors, the valuation of the market after the previous rise has been repaired to some extent. It is expected that the Hong Kong stock market will show a volatile trend in the short term, waiting for the further clarification of the evolution of the epidemic.
