

ChinaAMC China Focus Fund

Fund Factsheet

As of 31 Jan 2023

37/F, Bank of China Tower, 1 Garden Road, Hong Kong

Investment involves risks, including the loss of principal. The price of units or shares of the Funds may go up as well as down. Past performance is not indicative of future results. The value of the Funds can be extremely volatile and could go down substantially within a short period of time. You should read the Fund's Placing Memorandum or Explanatory Memorandum and Product Key Facts Statement for details, including risk factors. Investors should not base investment decisions on this marketing material alone. Please note:

- The Fund seeks to take investment exposure to companies in or have significant business exposure to China. Investment in China-related companies and in Chinese markets may involve (i) heightened political, tax, economic, foreign exchange, liquidity and regulatory (including the QFII policy) risks, compared to more developed economies or markets; and (ii) concentration risk which may result in greater volatility than broad-based investments. The China A Share market is also unstable, subject to risks of stock suspension, government intervention and foreign investment restrictions.
- The Fund will obtain exposure to the A Share market, partly or fully by investing into access products and will be exposed to the counterparty risk of the issuer of the access products. The availability of access products is limited by applicable regulations in China, and as a result the cost of investment is subject to market supply and demand forces. Where the supply is low relative to the demand, acquiring access products may involve a higher cost or a premium.
- The Fund is subject to risks associated with the Stock Connect, such as change of relevant rules and regulations, quota limitations, suspension of the Stock Connect and information technology limitation. In the event that the Fund's ability to invest in A Shares through the Stock Connect on a timely basis is adversely affected, the Manager will rely on A Share access products investment.
- The Fund will invest in A Share ETFs and is subject to the fees and charges and the risk of tracking errors of the relevant A Share ETFs. If the Fund invests in synthetic ETFs, it will also subject to risks related to derivative instruments.
- There are risks and uncertainties associated with the current PRC tax laws, regulations and practices in respect of capital gains (which may have retrospective effect). Possible changes on the actual applicable tax rates imposed by the SAT and possible expiration of the current exemption of corporate income tax on capital gains may increase the Fund's tax liability and adversely affect the Fund's NAV.
- The Fund will hold investments denominated in currencies different to the base currency of the Fund, meaning the Fund will be at risk to adverse movements in the foreign currency rates.

▲ Investment Objective

The Fund seeks to provide investors with long term capital growth through exposure to China-related companies by investing in equities and equity related instruments.

Fund Factsheet

▲ Portfolio Allocation

Sector Exposure (%)

Geographical Exposure (%)

▲ Manager's Comment

In the Hong Kong market in January, the Hang Seng Index rose 10.42% and the Hang Seng Technology Index rose 10.02%. The fund recorded a positive return of 7.69% for the month, slightly underperforming the Hang Seng Index by about 2.33%. China's economic data in December was overall better than expected and China's pandemic prevention and control optimized the recovery of high frequency indicators after the first round of pandemic peaks, with positive statements from multiple departments focusing on real estate demand-side easing. With the pandemic peaking in most mainland cities in late December, high-frequency indicators such as real estate sales, restaurant consumption and express delivery volume recovered rapidly during New Year's Day, and economic growth is expected to accelerate marginally in 1Q23, with real estate and consumption growth expected to improve further. The net buying amount of northbound funds has exceeded 100 billion so far this year, a record high for a single month, and has also been higher than the net buying amount for last year, forming a strong support for the trend of the Chinese stock market. Weighted sectors such as internet, finance and real estate have also performed better under the trend of continued capital allocation to Chinese stocks, while a few defensive-attributed sectors such as coal, electricity and gas have performed weaker. Global investors are now generally optimistic about China's economy and stock market, with 91% of respondents to the latest Bank of America fund manager survey expecting a stronger Chinese economy, a nearly 17-year high, and 42% of respondents saying they have increased their holdings in Chinese stocks. We will continue to closely track the state of China's economic recovery and geopolitical risk developments. The fund recorded a positive return of 1.4% for the month, slightly underperforming the Hang Seng Index by about 0.1% and outperforming the MSCI China Index by about 0.5%.
