

ChinaAMC China Focus Fund

Fund Factsheet

As of 31 Jan 2024

37/F, Bank of China Tower, 1 Garden Road, Hong Kong

Investment involves risks, including the loss of principal. The price of units or shares of the Funds may go up as well as down. Past performance is not indicative of future results. The value of the Funds can be extremely volatile and could go down substantially within a short period of time. You should read the Fund's Placing Memorandum or Explanatory Memorandum and Product Key Facts Statement for details, including risk factors. Investors should not base investment decisions on this marketing material alone. Please note:

- The Fund seeks to take investment exposure to companies in or have significant business exposure to China. Investment in China-related companies and in Chinese markets may involve (i) heightened political, tax, economic, foreign exchange, liquidity and regulatory (including the QFII policy) risks, compared to more developed economies or markets; and (ii) concentration risk which may result in greater volatility than broad-based investments. The China A Share market is also unstable, subject to risks of stock suspension, government intervention and foreign investment restrictions.
- The Fund will obtain exposure to the A Share market, partly or fully by investing into access products and will be exposed to the counterparty risk of the issuer of the access products. The availability of access products is limited by applicable regulations in China, and as a result the cost of investment is subject to market supply and demand forces. Where the supply is low relative to the demand, acquiring access products may involve a higher cost or a premium.
- The Fund is subject to risks associated with the Stock Connect, such as change of relevant rules and regulations, quota limitations, suspension of the Stock Connect and information technology limitation. In the event that the Fund's ability to invest in A Shares through the Stock Connect on a timely basis is adversely affected, the Manager will rely on A Share access products investment.
- The Fund will invest in A Share ETFs and is subject to the fees and charges and the risk of tracking errors of the relevant A Share ETFs. If the Fund invests in synthetic ETFs, it will also subject to risks related to derivative instruments.
- There are risks and uncertainties associated with the current PRC tax laws, regulations and practices in respect of capital gains (which may have retrospective effect). Possible changes on the actual applicable tax rates imposed by the SAT and possible expiration of the current exemption of corporate income tax on capital gains may increase the Fund's tax liability and adversely affect the Fund's NAV.
- The Fund will hold investments denominated in currencies different to the base currency of the Fund, meaning the Fund will be at risk to adverse movements in the foreign currency rates.

▲ Investment Objective

The Fund seeks to provide investors with long term capital growth through exposure to China-related companies by investing in equities and equity related instruments.

Fund Factsheet

▲ Portfolio Allocation

Sector Exposure (%)

Geographical Exposure (%)

▲ Manager's Comment

In January, the Hong Kong market experienced a decline, with the Hang Seng Index falling by 9.16% and the Hang Seng Tech Index dropping by 20.15%. During the same month, the fund recorded a negative return of -6.35%, performing slightly better than the Hang Seng Index by approximately 2.81% and outperforming the MSCI China Index by about 4.18%.

In the fourth quarter of 2023, China's GDP grew by 5.2% year-on-year. The year-on-year growth rates for China's total retail sales of consumer goods and industrial value added for enterprises above a designated size were 7.2% and 4.6%, respectively. However, real estate development investment decreased by 9.6% year-on-year, while both the sales area and sales value of commercial residential buildings declined by 8.5% and 6.5% year-on-year, respectively. The average national surveyed urban unemployment rate stood at 5.2%, a decrease of 0.4 percentage points compared to the previous year.

On January 15th, the People's Bank of China conducted a one-year Medium-term Lending Facility (MLF) operation with an amount of 995 billion yuan, maintaining the interest rate at 2.5%, unchanged from the previous month. This reflected the central bank's cautious approach in not excessively leveraging monetary policy space while the economy's growth remained steady. The National Development and Reform Commission (NDRC) stated that the next step would involve conducting a comprehensive assessment of the consistency of macroeconomic policy orientations, issuing policies that are conducive to stabilizing expectations, promoting growth, and ensuring employment. The NDRC also emphasized the need for prudently implementing contractionary and restrictive measures while conducting a comprehensive and precise analysis of the cumulative effects of various policies.

On January 22nd, Premier Li Qiang presided over an executive meeting of the State Council, emphasizing the importance of enhancing the consistency of macroeconomic policy orientations, innovating policy tools, coordinating policy measures, consolidating and strengthening the positive momentum of economic recovery, and promoting the stable and healthy development of the capital market. Yi Gang, the Governor of the People's Bank of China, announced during the meeting that on February 5th, the reserve requirement ratio for deposits would be lowered by 0.5 percentage points, injecting 1 trillion yuan of liquidity into the market. Additionally, on January 25th, the rediscount rate would be lowered by 0.25 percentage points, and efforts would continue to reduce the overall financing cost in society while maintaining stability.
