

ChinaAMC China Focus Fund

Fund Factsheet

As of 29 Feb 2024

37/F, Bank of China Tower, 1 Garden Road, Hong Kong

Investment involves risks, including the loss of principal. The price of units or shares of the Funds may go up as well as down. Past performance is not indicative of future results. The value of the Funds can be extremely volatile and could go down substantially within a short period of time. You should read the Fund's Placing Memorandum or Explanatory Memorandum and Product Key Facts Statement for details, including risk factors. Investors should not base investment decisions on this marketing material alone. Please note:

- The Fund seeks to take investment exposure to companies in or have significant business exposure to China. Investment in China-related companies and in Chinese markets may involve (i) heightened political, tax, economic, foreign exchange, liquidity and regulatory (including the QFII policy) risks, compared to more developed economies or markets; and (ii) concentration risk which may result in greater volatility than broad-based investments. The China A Share market is also unstable, subject to risks of stock suspension, government intervention and foreign investment restrictions.
- The Fund will obtain exposure to the A Share market, partly or fully by investing into access products and will be exposed to the counterparty risk of the issuer of the access products. The availability of access products is limited by applicable regulations in China, and as a result the cost of investment is subject to market supply and demand forces. Where the supply is low relative to the demand, acquiring access products may involve a higher cost or a premium.
- The Fund is subject to risks associated with the Stock Connect, such as change of relevant rules and regulations, quota limitations, suspension of the Stock Connect and information technology limitation. In the event that the Fund's ability to invest in A Shares through the Stock Connect on a timely basis is adversely affected, the Manager will rely on A Share access products investment.
- The Fund will invest in A Share ETFs and is subject to the fees and charges and the risk of tracking errors of the relevant A Share ETFs. If the Fund invests in synthetic ETFs, it will also subject to risks related to derivative instruments.
- There are risks and uncertainties associated with the current PRC tax laws, regulations and practices in respect of capital gains (which may have retrospective effect). Possible changes on the actual applicable tax rates imposed by the SAT and possible expiration of the current exemption of corporate income tax on capital gains may increase the Fund's tax liability and adversely affect the Fund's NAV.
- The Fund will hold investments denominated in currencies different to the base currency of the Fund, meaning the Fund will be at risk to adverse movements in the foreign currency rates.

▲ Investment Objective

The Fund seeks to provide investors with long term capital growth through exposure to China-related companies by investing in equities and equity related instruments.

Fund Factsheet

▲ Portfolio Allocation

Sector Exposure (%)

Geographical Exposure (%)

▲ Manager's Comment

In February, the Hong Kong market saw a 6.63% increase in the Hang Seng Index and a 14.2% increase in the Hang Seng Tech Index. In China, the manufacturing Purchasing Managers' Index (PMI) for January was 49.2, indicating a slight improvement in the manufacturing sector, while the non-manufacturing PMI was 50.7, indicating steady expansion in the non-manufacturing sector. On January 29th, the State-owned Assets Supervision and Administration Commission (SASAC) stated that it would comprehensively promote market value management assessment for listed companies, quantitatively evaluating the market performance of centrally-controlled listed companies. This move is expected to promote the high-quality development of listed companies and enhance market confidence.

The China Securities Regulatory Commission (CSRC) continued to maintain strict control over IPO approvals and resolutely delisted unqualified listed companies. During the two days after the Spring Festival, more than ten symposiums were held to solicit opinions and suggestions from various parties on strengthening capital market regulation, preventing and resolving risks, and promoting the high-quality development of the capital market. The quantitative trading reporting system of the Shanghai and Shenzhen Stock Exchanges was smoothly implemented, and the quantitative trading by northbound investors was included in the reporting scope based on the principle of consistency between domestic and foreign investors.

The partial improvement in economic data during the Spring Festival reflects the resilience of the Chinese economy. Policies aimed at improving market confidence in financial regulation and private sector oversight, as well as the upgraded regulation of quantitative trading reducing market volatility from a funding perspective. Chinese Foreign Minister Wang Yi met with US Secretary of State Blinken, agreeing to maintain dialogue and communication in various fields, further implement the "San Francisco Consensus," continue to advance diplomatic policies, Asia-Pacific affairs, maritime affairs, and dialogue consultations on artificial intelligence, maintain military communication, and ease geopolitical tensions. Multiple factors have contributed to the recent sustained improvement in the market. We believe that if fiscal policies continue to drive economic recovery in the future, there is an opportunity for the stock market to continue performing well.
