## Fund Factsheet

As of 28 Mar 2024

37/F, Bank of China Tower, 1 Garden Road, Hong Kong

Investment involves risks, including the loss of principal. The price of units or shares of the Funds may go up as well as down. Past performance is not indicative of future results. The value of the Funds can be extremely volatile and could go down substantially within a short period of time. You should read the Fund's Placing Memorandum or Explanatory Memorandum and Product Key Facts Statement for details, including risk factors. Investors should not base investment decisions on this marketing material alone. Please note:

- The Fund seeks to take investment exposure to companies in or have significant business exposure to China. Investment in China-related companies and in Chinese markets may involve (i) heightened political, tax, economic, foreign exchange, liquidity and regulatory (including the QFII policy) risks, compared to more developed economies or markets; and (ii) concentration risk which may result in greater volatility than broad-based investments. The China A Share market is also unstable, subject to risks of stock suspension, government intervention and foreign investment restrictions.
- The Fund will obtain exposure to the A Share market, partly or fully by investing into access products and will be exposed to the counterparty risk of the issuer of the access products. The availability of access products is limited by applicable regulations in China, and as a result the cost of investment is subject to market supply and demand forces. Where the supply is low relative to the demand, acquiring access products may involve a higher cost or a premium.
- The Fund is subject to risks associated with the Stock Connect, such as change of relevant rules and regulations, quota limitations, suspension of the Stock Connect and information technology limitation. In the event that the Fund's ability to invest in A Shares through the Stock Connect on a timely basis is adversely affected, the Manager will rely on A Share access products investment.
- The Fund will invest in A Share ETFs and is subject to the fees and charges and the risk of tracking errors of the relevant A Share ETFs. If the Fund invests in synthetic ETFs, it will also subject to risks related to derivative instruments.
- There are risks and uncertainties associated with the current PRC tax laws, regulations and practices in respect of capital gains (which may have retrospective effect). Possible changes on the actual applicable tax rates imposed by the SAT and possible expiration of the current exemption of corporate income tax on capital gains may increase the Fund's tax liability and adversely affect the Fund's NAV.
- The Fund will hold investments denominated in currencies different to the base currency of the Fund, meaning the Fund will be at risk to adverse movements in the foreign currency rates.

### ▲ Investment Objective

The Fund seeks to provide investors with long term capital growth through exposure to China-related companies by investing in equities and equity related instruments.

## Fund Factsheet

### ▲ Portfolio Allocation

#### Sector Exposure (%)

#### Geographical Exposure (%)

### ▲ Manager's Comment

In March, the Hang Seng Index in the Hong Kong market rose by 0.18%, while the Hang Seng Tech Index increased by 1.35%. The fund recorded a positive return of 1.57% this month, outperforming the Hang Seng Index by approximately 1.4% and slightly outperforming the MSCI China Index by around 0.69%.

China's PMI data for March exceeded expectations, with the manufacturing PMI rising to 50.8%, returning to the expansion zone, and the non-manufacturing PMI accelerating to 53.0%. The data indicates that China's economic recovery has accelerated significantly since March, with a broadening scope of recovery as PMI readings for enterprises of all sizes have returned above the expansion threshold. China's major economic data for January and February exceeded expectations, and the People's Bank of China kept the LPR (Loan Prime Rate) unchanged. On March 18, the National Bureau of Statistics released data showing that China's industrial value-added for January and February increased by 7.0% year-on-year, higher than the expected 4.3%; retail sales of consumer goods for January and February grew by 5.5% year-on-year, surpassing the expected 5.4%; and fixed-asset investment in January and February grew by 4.2%, surpassing the expected 3.0%. The better-than-expected year-on-year data for January and February were partly boosted by the leap year effect. Looking at seasonally adjusted month-on-month data, production showed significant improvement while social retail remained weak, and the trend of economic recovery still requires further validation through more high-frequency data.

On March 20, the People's Bank of China maintained the one-year and five-year LPR rates unchanged. Deputy Governor of the central bank, Pan Gongsheng, stated in a press conference the following day that in addition to monitoring the total amount of credit, more attention should be given to guiding financial institutions to steadily release credit, avoiding excessive front-loading that may lead to insufficient momentum. There is still room for a reduction in the required reserve ratio. On March 13, the State Council issued the "Action Plan for Promoting Large-Scale Equipment Updates and Trade-Ins of Consumer Goods," which clearly defined five key areas and 20 major tasks, aiming to stimulate investment and consumption demand in multiple industries. We will pay attention to the economic data to be released in the coming week, as well as whether there will be significant fiscal support for large-scale equipment updates and consumer goods trade-ins. It is expected that the Hong Kong stock market will fluctuate as it awaits further clarification of the turning point in the fundamentals.
