Eligible Collective Investment Scheme under "Capital Investment Entrant Scheme"²

As of 31 Jan 2024

37/F, Bank of China Tower, 1 Garden Road, Hong Kong

- Investment involves risks, including the loss of principal. The price of units or shares of the Funds may go up as well as down. Past performance is not indicative of future results. The value of the Funds can be extremely volatile and could go down substantially within a short period of time. You should read the Fund's Placing Memorandum or Explanatory Memorandum and Product Key Facts Statement for details, including risk factors. Investors should not base investment decisions on this marketing communication alone. Please note:
- The Fund focuses on investing in equities of China-related companies with registered offices located in the People's Republic of China ("PRC") and/or Hong Kong, and/or China-related companies that do not have their registered offices in the PRC or Hong Kong but either (a) carry out a predominant proportion of their business activities in the PRC or Hong Kong, or (b) are holding companies which predominantly own companies with registered offices in the PRC or Hong Kong.
- Investment in equity securities is subject to market risk and the prices of such securities may be volatile. Factors affecting the stock values are numerous, including but not limited to changes in investment sentiment, political environment, economic environment, regional or global economic instability, currency and interest rate fluctuations. If the market value of equity securities in which the Fund invests in goes down, the net asset value of the Fund may be adversely affected, and investors may suffer substantial losses.
- The Fund focuses its investments on China-related equity securities. The Fund is likely to be more volatile than a broad-based fund, as the Fund is more susceptible to fluctuations in value resulting from limited number of holdings or from unfavourable performance in such equity securities that the Fund invests in.
- The Fund may invest in the PRC markets via indirect means, which involve certain risks and special considerations not typically associated with investment in more developed economies or markets, such as greater political, tax, economic, foreign exchange, liquidity, legal and regulatory risk.
- The Fund may invest in the PRC domestic securities market indirectly through QFI funds which may be subject to RMB currency risk, QFI regime risk, A-Share market risk and PRC tax risk.

▲ Investment Objective

The Fund seeks to maximise capital growth by investing primarily (i.e. at least 70% of its net assets) in China related listed equity securities.

▲ Manager's Comment

MSCI China index dropped by 10.53% in the month of January, which is a very big monthly decline. Several factors led to the downside trigger, including a lack of necessary policy responses to boost business and consumer confidence, concerns about US-China relations, early worries about Hong Kong's fiscal conditions, and the unwinding of onshore structural products. But we have still seen many positive aspects. On Jan 2, the People's Bank of China announced the reintroduction of PSL after a hiatus of more than 10 months. On Jan 24, the Governor of the People's Bank of China, Pan Gongsheng, unexpectedly announced a reduction of 0.5 percentage points in the reserve requirement ratio for financial institutions, starting from February 5th of this year. The central bank also announced a reduction of 0.25 percentage points in the interest rates for Agricultural Development Re-lending, Small and Micro Enterprise Re-lending, and Rediscount loans, starting from January 25th of this year. On the same day, the SASAC said they will comprehensively promote the inclusion of market value management in the performance appraisal system for the executives at listed SOEs so that investors can benefit from higher profitability and the country's high-quality development can be facilitated by improved competitiveness.

China's manufacturing PMI index rose to 49.2 in Jan from 49.0 in Dec. The output and new orders sub-index improved to 51.3 and 49.0 in Jan from 50.2 and 48.7 in Dec, respectively. The non-manufacturing PMI rose to 50.7 in Jan from 50.4 in Dec. The services PMI decreased to 50.1 in Jan from 49.93 in Dec. The PMIs of service industries such as postal and railway transportation were above 60 while the PMIs of real estate and public facility management were below 50. The construction PMI decreased to 53.9 in Jan from 56.9 in Dec because the construction industry has entered the off-season on low temperatures in winter and the upcoming Chinese New Year holiday.

Looking forward, we maintain our long-term positive view on the Chinese equity market. Beyond the national team's measured and recurrent purchases of leading indices, policy actions have centered around rebalancing the onshore market's microstructure and returns to shareholders for likely steadier outcomes. The ban on new lending of restricted shares is a plus, and the existing book of stock loans will expire in due time to ease selling pressure. For SOEs, new KPIs of ROE and operating cash flow introduced last year will likely be expanded to include market value management, with cash dividends and share buybacks encouraged. We also believe that the feedback from the current market and sentiment will drive the introduction of more favorable policies.

In terms of portfolio positioning, we will continue to seek a balance between value and growth. We continue to focus on the long-term policy beneficiaries (e.g. software localization and advanced manufacturing), short-term policy beneficiaries (property and property-related sectors), and reopening-related opportunities (e.g. consumer, Internet, and financials). We will prudently pay attention to some thematic opportunities, including AI and SOE re-rating.
