

ChinaAMC Global Investment Grade Bond Fund

Fund Factsheet | As of 30 May 2025 New Capital Investment Entrant Scheme (New CIES) Eligible fund

Investment involves risks, including the loss of principal. The price of units or shares of the Fund may go up as well as down. Past performance is not indicative of future results. The value of the Fund can be extremely volatile and could go down substantially within a short period of time. You should read the Fund's Placing Memorandum or Explanatory Memorandum and Product Key Facts Statement for details, including risk factors. Investors should not base investment decisions on this marketing material alone. Please note:

- ChinaAMC Global Investment Grade Bond Fund (the "Fund") seeks to provide Unitholders with long term capital growth primarily through investing in investment grade fixed income and debt instruments in markets worldwide.
- The Fund's investment may be denominated and a unit class may be designated in a currency other than its base currency. The NAV of the Fund may be affected unfavourably by exchange rates and by changes in exchange rate control.
- Investment in debt instruments involves credit/counterparty risk, interest rate risk, volatility and liquidity risk, credit/downgrading risk, sovereign debt risk, valuation risk, credit rating risk, credit rating agency risk and risks associated with collateralized and/or securities products.
- The Fund may invest in convertible bonds which are a hybrid between debt and equity. Convertibles will be exposed to equity movement and greater volatility than straight bond investments.
- Debt instruments with loss-absorption features are subject to the risk of being written down or converted to ordinary shares upon the occurrence of certain pre-defined trigger events, which are complex and difficult to predict and may result in a significant or total reduction in the value of such instruments.
- The Fund may invest in urban investment bonds which are typically not guaranteed by Chinese central or local governments. In the event of default, the Fund could suffer substantial loss.
- The Fund may enter into sale and repurchase transactions and may suffer loss in the event of counterparty's failure.
- Investment in emerging markets (including the PRC) may involve increased risks and special considerations, such as liquidity risks, currency risks/control, political and economic uncertainties, legal and taxation risks, settlement risks, custody risk and high volatility.
- The Fund's investment may be concentrated in a jurisdiction or region. The value of the Fund may be more volatile than that of a fund having a more diverse portfolio of investments.
- The Fund may acquire FDIs for hedging purpose, which involves volatility risk, credit risk, liquidity risk, management risk, valuation risk, counterparty risk and OTC transaction risk. In adverse situations, such hedging may become ineffective and/or cause the Fund to suffer significant loss.
- There is no guarantee that the hedging instruments will be available or the hedging techniques will be effective for a hedged class. Hedging can limit potential gains of a hedged class.
- RMB is not freely convertible and is subject to exchange controls and restrictions. Any depreciation of RMB could adversely affect the value of investors' investments in the Fund. Payment of redemptions and/or dividend in RMB may be delayed due to exchange controls and restrictions.
- Payment of dividends out of capital and/or effectively out of capital amounts to a return or withdrawal of part of an investor's original investment or from any capital gains attributable to those original investments. Any such distributions may result in an immediate reduction of the NAV per Share of the Fund.

Investment Objective

The investment objective of the Fund is to provide Unitholders with long term capital growth primarily through investing in investment grade fixed income and debt instruments in markets worldwide.

1 Please refer to the Fund's prospectus for further details (including fees).

2 Past performance information is not indicative of future performance. Investors may not get back the full amount invested. The computation basis of the performance is calculated on NAV-to-NAV, with dividend reinvested. The performance of the Fund prior to 8 April 2024 was achieved under circumstances that no longer apply as a result of a change in investment strategy of the Fund. Investors should exercise caution when considering the past performance of the Fund prior to 8 April 2024. Prior to 8 April 2024, the Manager did not anticipate that the Fund would invest more than 30% of its NAV in any single country other than the PRC.

3 Calculated since the inception date of each respective share class.

4 Credit rating is calculated using the "Best Rating Approach", by referencing to the credit ratings of three credit rating agencies: Moody's, Fitch and S&P and using the highest rating among the three ratings.

5 Calculated with the weighted average of median yield to worst of each holding. Yield to Worst is the lowest potential yield on a bond assuming no default by the issuer. It is calculated by evaluating the least favourable outcome for each bond issue. It is not indicative of the fund's actual performance, or the interest investors may ultimately receive.

▲ Manager's Comment

In May, global financial markets remained volatile under the influence of shifting U.S. trade policies. Early in the month, news of a tariff suspension boosted the market, leading to a notable rebound in major risk assets. However, concerns over U.S. Treasury supply and the fiscal deficit drove Treasury yields significantly higher. Credit spreads of global investment-grade bonds generally narrowed, partially offsetting the negative impact of rising U.S. benchmark yields.

Although U.S. Treasury yields rose for most of the month, they retreated toward the end. Combined with the positive performance of credit spreads, the Bloomberg Global Investment Grade Credit Index recorded a modest total return increase of 0.097% in May.

The portfolio will continue to adhere to a globally diversified allocation strategy, with a focus on issuers with higher credit ratings to effectively manage credit risk. In light of U.S. Treasury yield fluctuations and economic outlook uncertainties, we will dynamically adjust the portfolio's overall duration and regional allocation. We will closely monitor key developments in U.S. tariff policy in July, as well as policy responses and inflation trends in major global economies, and prudently assess the risk-return characteristics of various assets to strive for stable returns while controlling risk.
