

# ChinaAMC Global Investment Grade Bond Fund

Fund Factsheet | As of 30 Jun 2025

New Capital Investment Entrant Scheme (New CIES) Eligible fund

Investment involves risks, including the loss of principal. The price of units or shares of the Fund may go up as well as down. Past performance is not indicative of future results. The value of the Fund can be extremely volatile and could go down substantially within a short period of time. You should read the Fund's Placing Memorandum or Explanatory Memorandum and Product Key Facts Statement for details, including risk factors. Investors should not base investment decisions on this marketing material alone. Please note:

- ChinaAMC Global Investment Grade Bond Fund (the "Fund") seeks to provide Unitholders with long term capital growth primarily through investing in investment grade fixed income and debt instruments in markets worldwide.
- The Fund's investment may be denominated and a unit class may be designated in a currency other than its base currency. The NAV of the Fund may be affected unfavourably by exchange rates and by changes in exchange rate control.
- Investment in debt instruments involves credit/counterparty risk, interest rate risk, volatility and liquidity risk, credit/downgrading risk, sovereign debt risk, valuation risk, credit rating risk, credit rating agency risk and risks associated with collateralized and/or securities products.
- The Fund may invest in convertible bonds which are a hybrid between debt and equity. Convertibles will be exposed to equity movement and greater volatility than straight bond investments.
- Debt instruments with loss-absorption features are subject to the risk of being written down or converted to ordinary shares upon the occurrence of certain pre-defined trigger events, which are complex and difficult to predict and may result in a significant or total reduction in the value of such instruments.
- The Fund may invest in urban investment bonds which are typically not guaranteed by Chinese central or local governments. In the event of default, the Fund could suffer substantial loss.
- The Fund may enter into sale and repurchase transactions and may suffer loss in the event of counterparty's failure.
- Investment in emerging markets (including the PRC) may involve increased risks and special considerations, such as liquidity risks, currency risks/control, political and economic uncertainties, legal and taxation risks, settlement risks, custody risk and high volatility.
- The Fund's investment may be concentrated in a jurisdiction or region. The value of the Fund may be more volatile than that of a fund having a more diverse portfolio of investments.
- The Fund may acquire FDIs for hedging purpose, which involves volatility risk, credit risk, liquidity risk, management risk, valuation risk, counterparty risk and OTC transaction risk. In adverse situations, such hedging may become ineffective and/or cause the Fund to suffer significant loss.
- There is no guarantee that the hedging instruments will be available or the hedging techniques will be effective for a hedged class. Hedging can limit potential gains of a hedged class.
- RMB is not freely convertible and is subject to exchange controls and restrictions. Any depreciation of RMB could adversely affect the value of investors' investments in the Fund. Payment of redemptions and/or dividend in RMB may be delayed due to exchange controls and restrictions.
- Payment of dividends out of capital and/or effectively out of capital amounts to a return or withdrawal of part of an investor's original investment or from any capital gains attributable to those original investments. Any such distributions may result in an immediate reduction of the NAV per Share of the Fund.

## Investment Objective

The investment objective of the Fund is to provide Unitholders with long term capital growth primarily through investing in investment grade fixed income and debt instruments in markets worldwide.

## Fund Information<sup>1</sup>

1 Please refer to the Fund's prospectus for further details (including fees).

2 Past performance information is not indicative of future performance. Investors may not get back the full amount invested. The computation basis of the performance is calculated on NAV-to-NAV, with dividend reinvested. The performance of the Fund prior to 8 April 2024 was achieved under circumstances that no longer apply as a result of a change in investment strategy of the Fund. Investors should exercise caution when considering the past performance of the Fund prior to 8 April 2024. Prior to 8 April 2024, the Manager did not anticipate that the Fund would invest more than 30% of its NAV in any single country other than the PRC.

3 Calculated since the inception date of each respective share class.

4 Credit rating is calculated using the "Best Rating Approach", by referencing to the credit ratings of three credit rating agencies: Moody's, Fitch and S&P and using the highest rating among the three ratings.

5 Calculated with the weighted average of median yield to worst of each holding. Yield to Worst is the lowest potential yield on a bond assuming no default by the issuer. It is calculated by evaluating the least favourable outcome for each bond issue. It is not indicative of the fund's actual performance, or the interest investors may ultimately receive.

## ▲ Manager's Comment

In June, global market sentiment underwent a significant shift. At the beginning of the month, markets were briefly pressured by heightened geopolitical tensions in the Middle East. However, attention soon turned to U.S. macroeconomic fundamentals and monetary policy. Continued signs of a cooling labor market and dovish remarks from Federal Reserve officials boosted expectations that the Fed would begin a rate-cutting cycle, triggering a sharp decline in global sovereign bond yields.

Driven by this, global investment-grade bonds recorded strong performance, with minor fluctuations in credit spreads offset by capital gains from falling interest rates. The Bloomberg Global Investment Grade Credit Index posted a return of +2.3% in June.

The portfolio continued to benefit from its strategy of global diversification and emphasis on high-rated credits during the June rate decline. Looking ahead, the market debate centers on distinguishing between a "soft landing" (credit-positive) and "stagflation" (credit-negative). While rate-cut expectations support bonds, the depth and breadth of the economic slowdown will be key to the direction of credit spreads.

We will continue to dynamically manage portfolio duration to respond to interest rate fluctuations, while closely monitoring changes in corporate earnings and default rates. We will prudently assess credit risks across different regions and sectors, remaining alert to the risk of widening spreads caused by an unexpectedly sharp economic deterioration.
