

ChinaAMC Global Investment Grade Bond Fund

Fund Factsheet | As of 30 Apr 2026

New Capital Investment Entrant Scheme (New CIES) Eligible fund

Investment involves risks, including the loss of principal. The price of units or shares of the Fund may go up as well as down. Past performance is not indicative of future results. The value of the Fund can be extremely volatile and could go down substantially within a short period of time. You should read the Fund's Placing Memorandum or Explanatory Memorandum and Product Key Facts Statement for details, including risk factors. Investors should not base investment decisions on this marketing material alone. Please note:

- ChinaAMC Global Investment Grade Bond Fund (the "Fund") seeks to provide Unitholders with long term capital growth primarily through investing in investment grade fixed income and debt instruments in markets worldwide.
- The Fund's investment may be denominated and a unit class may be designated in a currency other than its base currency. The NAV of the Fund may be affected unfavourably by exchange rates and by changes in exchange rate control.
- Investment in debt instruments involves credit/counterparty risk, interest rate risk, volatility and liquidity risk, credit/downgrading risk, sovereign debt risk, valuation risk, credit rating risk, credit rating agency risk and risks associated with collateralized and/or securities products.
- The Fund may invest in convertible bonds which are a hybrid between debt and equity. Convertibles will be exposed to equity movement and greater volatility than straight bond investments.
- Debt instruments with loss-absorption features are subject to the risk of being written down or converted to ordinary shares upon the occurrence of certain pre-defined trigger events, which are complex and difficult to predict and may result in a significant or total reduction in the value of such instruments.
- The Fund may invest in urban investment bonds which are typically not guaranteed by Chinese central or local governments. In the event of default, the Fund could suffer substantial loss.
- The Fund may enter into sale and repurchase transactions and may suffer loss in the event of counterparty's failure.
- Investment in emerging markets (including the PRC) may involve increased risks and special considerations, such as liquidity risks, currency risks/control, political and economic uncertainties, legal and taxation risks, settlement risks, custody risk and high volatility.
- The Fund's investment may be concentrated in a jurisdiction or region. The value of the Fund may be more volatile than that of a fund having a more diverse portfolio of investments.
- The Fund may acquire FDIs for hedging purpose, which involves volatility risk, credit risk, liquidity risk, management risk, valuation risk, counterparty risk and OTC transaction risk. In adverse situations, such hedging may become ineffective and/or cause the Fund to suffer significant loss.
- There is no guarantee that the hedging instruments will be available or the hedging techniques will be effective for a hedged class. Hedging can limit potential gains of a hedged class.
- RMB is not freely convertible and is subject to exchange controls and restrictions. Any depreciation of RMB could adversely affect the value of investors' investments in the Fund. Payment of redemptions and/or dividend in RMB may be delayed due to exchange controls and restrictions.
- Payment of dividends out of capital and/or effectively out of capital amounts to a return or withdrawal of part of an investor's original investment or from any capital gains attributable to those original investments. Any such distributions may result in an immediate reduction of the NAV per Share of the Fund.

Investment Objective

The investment objective of the Fund is to provide Unitholders with long term capital growth primarily through investing in investment grade fixed income and debt instruments in markets worldwide.

1 Please refer to the Fund's prospectus for further details (including fees).

2 Past performance information is not indicative of future performance. Investors may not get back the full amount invested. The computation basis of the performance is calculated on a daily NAV-to-NAV basis, with dividend reinvested (in case of distributing/distribution unit/share class, without dividend reinvested), daily NAV is zero if units or shares of a fund, sub-fund or share class are fully redeemed. Where no past performance is shown, meaning there was insufficient data available in that period to calculate and provide fair performance. The performance of the Fund prior to 8 April 2024 was achieved under circumstances that no longer apply as a result of a change in investment strategy of the Fund. Investors should exercise caution when considering the past performance of the Fund prior to 8 April 2024. Prior to 8 April 2024, the Manager did not anticipate that the Fund would invest more than 30% of its NAV in any single country other than the PRC.

3 Calculated since the inception date of each respective share class.

4 Credit rating is calculated using the "Best Rating Approach", by referencing to the credit ratings of three credit rating agencies: Moody's, Fitch and S&P and using the highest rating among the three ratings.

5 Calculated with the weighted average of median yield to worst of each holding. Yield to Worst is the lowest potential yield on a bond assuming no default by the issuer. It is calculated by evaluating the least favourable outcome for each bond issue. It is not indicative of the fund's actual performance, or the interest investors may ultimately receive.

▲ Manager's Comment

In April, global investment-grade credit bonds performed well. Despite a modest rise in U.S. Treasury yields, the tightening of credit spreads and coupon income provided support to returns. During the month, U.S. Treasury yields across the 2-year to 30-year tenors rose by approximately 5 to 8 bps. The 10-year yield closed at 4.37% at month-end, while the 30-year approached 4.97%, indicating that risk-free rates remained at relatively elevated levels. However, compared to March, the pace of rate increases slowed significantly, and market risk appetite showed signs of recovery. On the credit side, U.S. investment-grade credit spreads narrowed notably in April, supported by resilient corporate earnings, strong primary market demand and continued allocation from overseas investors into high-quality U.S. credit. Asian investment-grade credit also delivered stable performance, driven by relatively stable regional fundamentals, improved technical conditions and a recovery in primary issuance. Overall, global investment-grade credit recorded positive returns, with the Bloomberg Global Investment Grade Credit Index delivering a return of +1.36% in April.

Against this backdrop, the portfolio will continue to place equal emphasis on interest rate risk management and credit selection. On the one hand, with long-end U.S. Treasury yields still at relatively elevated levels and uncertainties remaining around inflation and the policy path, the portfolio will continue to prudently manage duration exposure and avoid taking excessive beta while the direction of rates is not yet fully clear. On the other hand, within global investment-grade credit allocation, the portfolio will continue to dynamically assess relative value across high-quality issuers in the U.S., Asia and other regions, with a stronger focus on credit quality, financing resilience, industry fundamentals and liquidity conditions. Priority will be given to high-quality issuers with solid fundamentals, relatively attractive valuations and stable coupon income, while diversification across regions and sectors will be used to enhance the stability of returns and resilience against volatility in the current market environment.
