

Investment involves risks, including the loss of principal. The price of units or shares of the Funds may go up as well as down. Past performance is not indicative of future results. The value of the Funds can be extremely volatile and could go down substantially within a short period of time. You should read the Fund's Placing Memorandum or Explanatory Memorandum and Product Key Facts Statement for details, including risk factors. Investors should not base investment decisions on this marketing material alone. Please note:

- The Fund invests primarily in China A-Shares listed on SSE and SZSE through the QFI status granted to the Investment Manager and through Stock Connect.
- Investment in equity securities is subject to market risk and the prices of such securities may be volatile.
- Investing in the PRC, involves risks associated with emerging market, with greater political, tax, economic, foreign exchange, liquidity, legal and regulatory risks.
- The Fund is subject to risks relating to the QFI regime, such as change of rules and regulations, default in execution or settlement of transaction by a PRC broker or the PRC Custodian and repatriation restrictions.
- The Fund is subject to risks associated with the Stock Connect, such as change of relevant rules and regulations, quota limitations, suspension of programme.
- Investment in Mainland China debt securities involves volatility and liquidity risks, credit/counterparty risk, interest rate risk, credit rating and downgrading risk, credit rating agency risk, and valuation risk.
- The Fund may acquire FDIs for investment and/or hedging purposes. Risks associated with FDI include counterparty/credit risk, liquidity risk, valuation risk, volatility risk and over-the-counter transaction risk. Exposure to FDI may lead to a high risk of significant loss by the Fund.
- The Fund will hold investments denominated in currencies different to the base currency, meaning the Fund will be at risk to adverse movements in the foreign currency rates. RMB is currently not freely convertible and is subject to exchange controls and restrictions. A non-RMB based investors in units are exposed to foreign exchange risk.

▲ Investment Objective

The Fund seeks to achieve capital appreciation and income generation by investing primarily in onshore RMB denominated equity securities issued by issuers based in, or having a significant exposure to, Mainland China and Hong Kong, as further described below. The Investment Manager contemplates investing directly into China A-Shares using its QFI status and the Stock Connect. As at the date of the Fund's prospectus, the Investment Manager, when using Stock Connect, will be limited to investments in China A-Shares listed on the SSE and the SZSE.

▲ Manager's Comment

In December 2024, the Wind All Share Index was -1.96%, the CSI 300 Index was +0.47%, and the ChiNext Index was -3.71%. Meanwhile, the Hang Seng Index showed a +3.28% increase, and the Hang Seng Tech Index rose by +2.63%. In the United States, the performances of the Dow Jones, S&P 500, and Nasdaq indices were -5.27%, -2.5%, and +0.48%, respectively. From the perspective of sector industries in A-shares, banks, home appliances, telecommunications, oil and petrochemicals, automobiles, and utilities outperformed the market, while real estate, media, computers, pharmaceuticals, and materials underperformed.

In December, the overall Chinese stock market was volatile, with A-shares showing some weakness in the final trading days. The Chinese stock market performed weaker than the U.S. market, with A-shares weaker than Hong Kong stocks. The U.S. December manufacturing PMI hit its highest level since June, with consumer spending demonstrating resilience and core inflation remaining stable. The Federal Reserve's FOMC meeting in December had a cautious tone. The trends of the U.S. dollar index and U.S. bond rates continued from the Trump era, with a stronger dollar and higher bond rates.

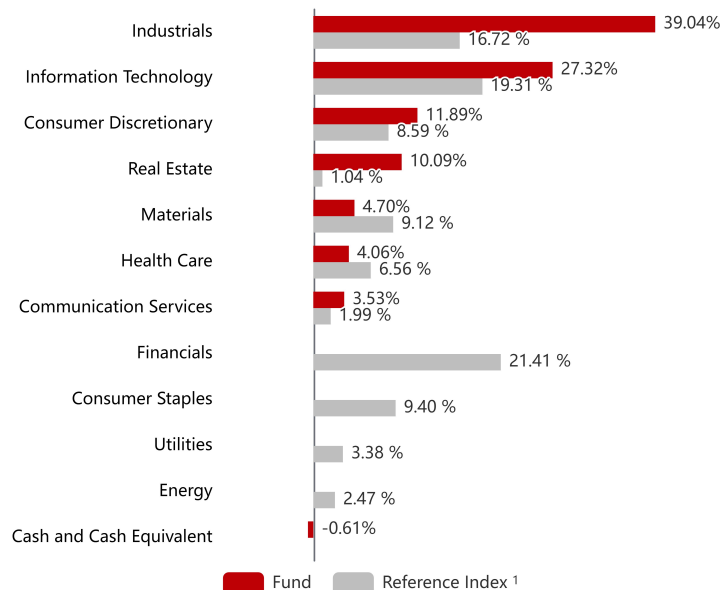

From a domestic economic perspective, industrial value added in November showed a slight year-on-year increase, but social retail sales growth slowed down, and year-on-year export growth also decelerated. November's domestic month-on-month CPI data continued to show weakness. Overall, the U.S. economy showed resilience, while the domestic recovery process was relatively weak. China's government bond yields continued to decline, and the Renminbi faced pressure for depreciation.

In this environment, banks and telecommunications with high dividend yields and value attributes, as well as appliances benefiting from replacement demand, outperformed the market, while cyclical and growth stocks showed weaker performance. Market volatility was driven by expectations from political meetings and the Central Economic Work Conference. Hong Kong stocks adjusted before A-shares in November, showing stronger resilience than A-shares in December.

Looking forward, it is still believed that the core contradiction in the Chinese stock market lies in the country's economic recovery, with marginal impacts from geopolitical and international monetary environments that are not expected to significantly influence the direction of the Chinese market. In the current environment, the focus is shifting from larger economic stimulus policies and solutions for real estate and local financing risks towards fiscal policy introduced by the Chinese government. As China's internal policies are rolled out and implemented, U.S. policies towards China will become clearer, leading to significant market fluctuations due to changes in internal and external factors. In the midst of this volatility, there will be a more proactive approach to stock selection, with a particular emphasis on sectors such as pharmaceuticals, technology, and manufacturing.
