

ChinaAMC New Horizon China A Share Fund*

Fund Factsheet | As of 27 Jan 2025

Investment involves risks, including the loss of principal. The price of units or shares of the Funds may go up as well as down. Past performance is not indicative of future results. The value of the Funds can be extremely volatile and could go down substantially within a short period of time. You should read the Fund's Placing Memorandum or Explanatory Memorandum and Product Key Facts Statement for details, including risk factors. Investors should not base investment decisions on this marketing material alone. Please note:

- The Fund invests primarily in China A-Shares listed on SSE and SZSE through the QFI status granted to the Investment Manager and through Stock Connect.
- Investment in equity securities is subject to market risk and the prices of such securities may be volatile.
- Investing in the PRC, involves risks associated with emerging market, with greater political, tax, economic, foreign exchange, liquidity, legal and regulatory risks.
- The Fund is subject to risks relating to the QFI regime, such as change of rules and regulations, default in execution or settlement of transaction by a PRC broker or the PRC Custodian and repatriation restrictions.
- The Fund is subject to risks associated with the Stock Connect, such as change of relevant rules and regulations, quota limitations, suspension of programme.
- Investment in Mainland China debt securities involves volatility and liquidity risks, credit/counterparty risk, interest rate risk, credit rating and downgrading risk, credit rating agency risk, and valuation risk.
- The Fund may acquire FDIs for investment and/or hedging purposes. Risks associated with FDI include counterparty/credit risk, liquidity risk, valuation risk, volatility risk and over-the-counter transaction risk. Exposure to FDI may lead to a high risk of significant loss by the Fund.
- The Fund will hold investments denominated in currencies different to the base currency, meaning the Fund will be at risk to adverse movements in the foreign currency rates. RMB is currently not freely convertible and is subject to exchange controls and restrictions. A non-RMB based investors in units are exposed to foreign exchange risk.

▲ Investment Objective

The Fund seeks to achieve capital appreciation and income generation by investing primarily in onshore RMB denominated equity securities issued by issuers based in, or having a significant exposure to, Mainland China and Hong Kong, as further described below. The Investment Manager contemplates investing directly into China A-Shares using its QFI status and the Stock Connect. As at the date of the Fund's prospectus, the Investment Manager, when using Stock Connect, will be limited to investments in China A-Shares listed on the SSE and the SZSE.

Manager's Comment

In January 2025, the performance of various stock indices was as follows: Wind All Share Index: -2.32%, CSI 300 Index: -2.99%, ChiNext Index: -3.63%, while the Hang Seng Index: +0.82%, Hang Seng Tech Index: +5.72%, and the U.S. indices, Dow Jones, S&P 500, and Nasdaq, performed as follows: +4.7%, +2.7%, and +1.64% respectively. A-shares performed weaker compared to both Hong Kong and U.S. stocks. In terms of A-share sectors, non-ferrous metals, banks, automotive, media, and home appliances outperformed the market, while sectors like trade and retail, coal, food and beverages, non-bank financials, real estate, and construction underperformed.

In January, the overall Chinese stock market experienced initial declines followed by a rebound, with A-shares rebounding less than Hong Kong stocks. The market performance was weaker compared to the U.S. market, but the tech sector in the Hong Kong market showed the strongest performance. With the new U.S. president officially taking office, market expectations towards China softened in the short term due to interactions and statements between high-level officials from both countries. Internally, six ministries jointly issued documents to promote the entry of medium to long-term funds into the market. Investors were concerned about the economy, but believed that risk appetite had improved, leading to a volatile upward trend in the market.

During the Spring Festival, the release of DeepSeek-R1 attracted global attention. Its low cost, open-source nature, and capabilities comparable to top foreign models had various impacts on the Chinese stock market. Despite policy restrictions on the tech sector, the development of AI applications in China was supported by high-quality open-source large models. The progress made in the Chinese tech sector under such pressures could change pessimistic views on Chinese assets.

Looking ahead, the core contradiction in the Chinese stock market is believed to be China's economic recovery, with marginal impacts from geopolitical and international monetary environments. The primary focus is on the significant economic stimulus policies introduced by the Chinese government and the resolution of risks related to real estate and local financing platforms. As internal policies in China are implemented and the U.S. policy towards China becomes clearer, market expectations anticipate significant fluctuations influenced by both internal and external factors. It is speculated that the U.S. economy may face fiscal constraints, while the attractiveness of Europe and Japan is declining. Chinese assets are currently undervalued, and as investor sentiment shifts from pessimism towards a neutral stance, the relative attractiveness of the Chinese market is expected to increase. A-share market, primarily influenced by domestic investors, may be less sensitive to these relative attractiveness changes compared to Hong Kong stocks, which also have relatively lower valuations, hence the more pronounced rebound in Hong Kong stocks. It is believed that in the future, A-shares will follow the performance of Hong Kong stocks.

In summary, the market is predicted to experience upward volatility. A more proactive stock selection approach will be adopted, with a focus on sectors such as healthcare, technology, and manufacturing amidst market fluctuations.
