## Fund Factsheet

华夏基金(香港)有限公司  
CHINA ASSET MANAGEMENT (HONG KONG) LIMITED

As of 31 Aug 2022

37/F, Bank of China Tower, 1 Garden Road, Hong Kong

Investment involves risks, including the loss of principal. The price of units or shares of the Funds may go up as well as down. Past performance is not indicative of future results. The value of the Funds can be extremely volatile and could go down substantially within a short period of time. You should read the Fund's Placing Memorandum or Explanatory Memorandum and Product Key Facts Statement for details, including risk factors. Investors should not base investment decisions on this marketing material alone. Please note:

- ChinaAMC Select RMB Bond Fund (the "Fund"), through the RQFII quota obtained by the Manager, invests primarily in RMB denominated fixed income securities issued or distributed in the PRC and may invest a small portion of its assets in PRC A-Shares.
- The Fund is subject to regulations which regulate investments by RQFIIs in the PRC which have just been announced and novel in nature. Any uncertainty and change to the relevant laws and regulations (such as PRC tax laws and repatriation policy) in the PRC may adversely impact the Fund.
- Investment in single country (the PRC) markets involves concentration and other risks not typically associated with investment in more developed economies or markets.
- Investment in RMB debt instruments in the PRC involves liquidity risk, credit risk, credit rating risk and downgrade risk. There may not be a liquid or active market for such RMB debt instruments; the Fund may also be exposed to credit/insolvency risk of issuers of the debt securities. As the credit ratings of the debt instruments of the Fund are largely assigned by the credit agencies in the PRC, the methodologies adopted by such local rating agencies may not be consistent with the international rating agencies. In the event of downgrading in the credit ratings of a debt instrument or its issuer, the Fund's investment value in such security may be adversely affected.
- Investment in the Fund is subject to interest rate risk. Change of macro-economic policies in the PRC such as monetary and fiscal policy may cause changes to market interest rates, affecting the pricing of bonds and thus the return of the Fund.
- The Fund is denominated and settled in RMB; subscription and redemption must be made in RMB. RMB is not freely convertible and is subject to exchange controls and restrictions. There is no guarantee that RMB will not depreciate. HKD Investors may suffer a loss if RMB depreciates against HKD or such other currencies.

### ▲ Investment Objective

The Fund seeks to achieve capital appreciation and income generation by principally (i.e. up to 100% of its net assets) investing in (i) RMB denominated fixed income instruments, including bonds, issued or distributed within the PRC which (a) are denominated and settled in RMB and (b) are traded on the interbank bond market or are traded or transferred on the exchange market in the PRC, and (ii) fixed income funds (including money market funds) approved by the China Securities Regulatory Commission ("CSRC") and offered to the public in the PRC\*.

\* Investment in fixed income funds approved by the CSRC which are offered to the public in the PRC will not exceed 10% of the net asset value of the Fund.

<sup>1</sup>Past performance information is not indicative of future performance. Investors may not get back the full amount invested. The computation basis of the performance is calculated on NAV-to-NAV, with dividend reinvested. The investment returns are denominated in RMB. US/HK dollar-based investors are therefore exposed to fluctuations in the US/HK dollar/RMB exchange rate. With effect from 9 February 2018, the investment strategy of the Fund was changed. Performance information prior to 9 February 2018 was achieved under circumstances that no longer apply. The investment objective of the Fund has also been changed on 11 April 2014.

<sup>2</sup>Please refer to the Fund's Explanatory Memorandum for further details (including fees).

<sup>3</sup>Calculated since the relevant inception date of the respective share class.

## Fund Factsheet

### ▲ Manager's Comment

Not too much has changed since last month when it comes to Chinese economic reality. Lockdowns in multiple Chinese cities dampen the hope for a smooth growth path. A sub-par albeit improving manufacturing PMI reading showcases a slow recovery that is vulnerable to exogenous disruptions (e.g. covid resurgence, power shortage, heat wave, natural disasters etc.) at any time. PBoC takes a surprising step to cut a key policy interest rate in late Aug. Subsequent cuts in bank prime rates are another step to boost property sales as part of policy package to decelerate property sector's collapse. It remains unclear if the measures in place so far can do the job. For the coming quarters, it's likely to see a mild rebound of aggregate social financing data but its structure is not going to be very encouraging. On the other hand, government expenditure this year has been behind the curve. Despite the talks and data on paper, government investment has not been manifest in economic activities. Given the political shifts to be happening in late 2022 and early 2023, fiscal policy may continue to be subdued until new government gets in office next spring. As of now, PBoC has to do more heavy-lifting in supporting the economy.

However, PBoC is having an increasingly difficult balance to maintain. It has to keep a loose domestic monetary policy as well as watch CNY exchange rate closely when U.S. Fed is rising interest rates more than previously expected to rein in inflation. To be fair, CNY has been reasonably strong against most major currencies, but USD strength is adding pull to outflowing capital. If PBoC was fairly relaxed in Q2 while CNY had a quick depreciation against USD, USDCNY exchange rate has come into the discomfort zone of PBoC with the rate near 7.0 figure level. PBoC appears to have opened its toolkit to slow down the move a bit when it cut RRR for domestic USD deposit. It is yet to announce the reactivation of more powerful tools such as counter-cyclical factor (CCF) and risk reserve. Expect USDCNY to experience more volatility as PBoC contends with market force. It wouldn't be a surprise if USDCNY breaks new high if USD index tests previous high level 120 in coming quarters.

As exchange rate has become a concern, PBoC will probably refrain from cutting RRR or policy interest rate in recent term to avoid fueling CNY weakness. Therefore China bond yields may start a directionless period after the quick drop in late Aug. Bank TLAC bonds (including Tier2 Capital bonds and Perpetual Bonds) will be a better choice than Chinese treasuries in this scenario for their higher coupon incomes. At current stage, U.S. Fed is a pain to EM markets, but not for long. One should take a constructive view on China market. Fed is like an arrow at the end of its flight. Once the market sees through U.S. rates hike cycle, China equity market will have a healthy rebound with the help of ample liquidity.

### ▲ Latest Fund Distribution

Class	Ex-dividend Date	Distribution	Annualized Dividend Yield
Class A-DIST-RMB	Aug-30-2022	RMB 0.03	4.01%
Class A-DIST-USD	Aug-30-2022	USD 0.03	4.68%

Dividend is not guaranteed and may be paid out of capital or effectively paid out of capital.

Annualized Dividend Yield =  $[(1 + \text{distribution per unit} / \text{ex-dividend NAV})^{12}] - 1$ . The annualized dividend yield is calculated based on the latest dividend distribution with dividend reinvested, and may be higher or lower than the actual annual dividend yield. Positive distribution yield does not imply positive return.
