

# ChinaAMC Select RMB Bond Fund

## Fund Factsheet

As of 30 Nov 2022

37/F, Bank of China Tower, 1 Garden Road, Hong Kong

Investment involves risks, including the loss of principal. The price of units or shares of the Funds may go up as well as down. Past performance is not indicative of future results. The value of the Funds can be extremely volatile and could go down substantially within a short period of time. You should read the Fund's Placing Memorandum or Explanatory Memorandum and Product Key Facts Statement for details, including risk factors. Investors should not base investment decisions on this marketing material alone. Please note:

- ChinaAMC Select RMB Bond Fund (the "Fund"), through the RQFII quota obtained by the Manager, invests primarily in RMB denominated fixed income securities issued or distributed in the PRC and may invest a small portion of its assets in PRC A-Shares.
- The Fund is subject to regulations which regulate investments by RQFIIs in the PRC which have just been announced and novel in nature. Any uncertainty and change to the relevant laws and regulations (such as PRC tax laws and repatriation policy) in the PRC may adversely impact the Fund.
- Investment in single country (the PRC) markets involves concentration and other risks not typically associated with investment in more developed economies or markets.
- Investment in RMB debt instruments in the PRC involves liquidity risk, credit risk, credit rating risk and downgrade risk. There may not be a liquid or active market for such RMB debt instruments; the Fund may also be exposed to credit/insolvency risk of issuers of the debt securities. As the credit ratings of the debt instruments of the Fund are largely assigned by the credit agencies in the PRC, the methodologies adopted by such local rating agencies may not be consistent with the international rating agencies. In the event of downgrading in the credit ratings of a debt instrument or its issuer, the Fund's investment value in such security may be adversely affected.
- Investment in the Fund is subject to interest rate risk. Change of macro-economic policies in the PRC such as monetary and fiscal policy may cause changes to market interest rates, affecting the pricing of bonds and thus the return of the Fund.
- The Fund is denominated and settled in RMB; subscription and redemption must be made in RMB. RMB is not freely convertible and is subject to exchange controls and restrictions. There is no guarantee that RMB will not depreciate. HKD Investors may suffer a loss if RMB depreciates against HKD or such other currencies.

### ▲ Investment Objective

The Fund seeks to achieve capital appreciation and income generation by principally (i.e. up to 100% of its net assets) investing in (i) RMB denominated fixed income instruments, including bonds, issued or distributed within the PRC which (a) are denominated and settled in RMB and (b) are traded on the interbank bond market or are traded or transferred on the exchange market in the PRC, and (ii) fixed income funds (including money market funds) approved by the China Securities Regulatory Commission ("CSRC") and offered to the public in the PRC\*.

\* Investment in fixed income funds approved by the CSRC which are offered to the public in the PRC will not exceed 10% of the net asset value of the Fund.

<sup>1</sup>Past performance information is not indicative of future performance. Investors may not get back the full amount invested. The computation basis of the performance is calculated on NAV-to-NAV, with dividend reinvested. The investment returns are denominated in RMB. US/HK dollar-based investors are therefore exposed to fluctuations in the US/HK dollar/RMB exchange rate. With effect from 9 February 2018, the investment strategy of the Fund was changed. Performance information prior to 9 February 2018 was achieved under circumstances that no longer apply. The investment objective of the Fund has also been changed on 11 April 2014.

<sup>2</sup>Please refer to the Fund's Explanatory Memorandum for further details (including fees).

<sup>3</sup>Calculated since the relevant inception date of the respective share class.

## Fund Factsheet

### ▲ Manager's Comment

November brings about a sea change to two critical issues that have haunted China economy for so long: Covid policy and property sector policy. Sea change might even be an understatement. Especially on Covid policy, the change is almost a U-turn. Once Chinese central government starts softening the Covid-zero policy, it soon becomes a watershed. Community-level officials have hardly hesitated to loosen up local Covid control according to their own understanding of the new Covid policy, in the same way as they took ungranted initiatives to super-tighten local Covid control during the previous two years. The domino cards fall down so fast across the country that by the end of Nov Covid policy in China has virtually ceased to exist. It's a typical phenomenon in China's political interaction between grassroot level and central government. One can find another example in 1978 when eighteen village officials and farmers decided to break up local People's Commune system. This event is later enshrined in the CPC's narrative about the reform and opening-up. On property front, the old "three redlines" policy that restrained property developers' debt expansion is eventually abolished. The market now anticipates the lift of property purchase restraints.

Equity market is excited about the policy turnaround. Bond market on the contrary tumbles. Fall of bond prices then trigger redemption of so-called wealth management products (WMPs) sold by banks to individual clients. These WMPs mainly invest in credit bonds. Bond prices then tumble more under the selling pressure of WMPs. Bank clients choose to buy WMPs rather than bond funds because they don't want the risk of bond funds. However they inadvertently take on the same risk in WMPs. One can imagine that banks don't do a wonderful job in revealing the true risk associated with WMPs. So here is where the situation stands: bond market keeps on falling, inflicting bond issuers with higher borrowing costs. For the negative feedback to fade out, it takes time and maybe regulator's actions.

### ▲ Portfolio Allocation

#### Sector Exposure (%)

Weighted Avg Duration	2.82 Years
Weighted Avg Credit Ratings	AAA
Weighted Avg Yield to Maturity	1.38%

Credit Products include Medium Term Notes, Convertible Bonds, Corporate Bonds, Enterprise Bonds.

Data As of 30 Nov 2022

Data source: Bloomberg. As of 30 November 2022.

### ▲ Latest Fund Distribution

Class	Ex-dividend Date	Distribution	Annualized Dividend Yield
Class A-DIST-RMB	Nov-29-2022	RMB 0.03	4.07%
Class A-DIST-USD	Nov-29-2022	USD 0.03	4.89%

Dividend is not guaranteed and may be paid out of capital or effectively paid out of capital.

Annualized Dividend Yield =  $[(1 + \text{distribution per unit} / \text{ex-dividend NAV})^{12}] - 1$ . The annualized dividend yield is calculated based on the latest dividend distribution with dividend reinvested, and may be higher or lower than the actual annual dividend yield. Positive distribution yield does not imply positive return.
