

# ChinaAMC Select RMB Bond Fund

## Fund Factsheet

As of 30 Dec 2022

37/F, Bank of China Tower, 1 Garden Road, Hong Kong

Investment involves risks, including the loss of principal. The price of units or shares of the Funds may go up as well as down. Past performance is not indicative of future results. The value of the Funds can be extremely volatile and could go down substantially within a short period of time. You should read the Fund's Placing Memorandum or Explanatory Memorandum and Product Key Facts Statement for details, including risk factors. Investors should not base investment decisions on this marketing material alone. Please note:

- ChinaAMC Select RMB Bond Fund (the "Fund"), through the RQFII quota obtained by the Manager, invests primarily in RMB denominated fixed income securities issued or distributed in the PRC and may invest a small portion of its assets in PRC A-Shares.
- The Fund is subject to regulations which regulate investments by RQFIIs in the PRC which have just been announced and novel in nature. Any uncertainty and change to the relevant laws and regulations (such as PRC tax laws and repatriation policy) in the PRC may adversely impact the Fund.
- Investment in single country (the PRC) markets involves concentration and other risks not typically associated with investment in more developed economies or markets.
- Investment in RMB debt instruments in the PRC involves liquidity risk, credit risk, credit rating risk and downgrade risk. There may not be a liquid or active market for such RMB debt instruments; the Fund may also be exposed to credit/insolvency risk of issuers of the debt securities. As the credit ratings of the debt instruments of the Fund are largely assigned by the credit agencies in the PRC, the methodologies adopted by such local rating agencies may not be consistent with the international rating agencies. In the event of downgrading in the credit ratings of a debt instrument or its issuer, the Fund's investment value in such security may be adversely affected.
- Investment in the Fund is subject to interest rate risk. Change of macro-economic policies in the PRC such as monetary and fiscal policy may cause changes to market interest rates, affecting the pricing of bonds and thus the return of the Fund.
- The Fund is denominated and settled in RMB; subscription and redemption must be made in RMB. RMB is not freely convertible and is subject to exchange controls and restrictions. There is no guarantee that RMB will not depreciate. HKD Investors may suffer a loss if RMB depreciates against HKD or such other currencies.

### ▲ Investment Objective

The Fund seeks to achieve capital appreciation and income generation by principally (i.e. up to 100% of its net assets) investing in (i) RMB denominated fixed income instruments, including bonds, issued or distributed within the PRC which (a) are denominated and settled in RMB and (b) are traded on the interbank bond market or are traded or transferred on the exchange market in the PRC, and (ii) fixed income funds (including money market funds) approved by the China Securities Regulatory Commission ("CSRC") and offered to the public in the PRC\*.

\* Investment in fixed income funds approved by the CSRC which are offered to the public in the PRC will not exceed 10% of the net asset value of the Fund.

## Fund Factsheet

### ▲ Manager's Comment

2022 Dec sees accelerated policy turnabouts on many fronts. COVID-19 Omicron variant penetrates China's lockdown shield against the virus and turns out to be unstoppable even with huge economic pains and social sufferings. It might be evident early on from a scientific perspective that co-existence with Omicron would be the only way out. In hindsight, everything could have been more organized had the traditional Chinese wisdom of gradualism been honored. Same can be said when it comes to property sector policy. It's not so difficult to predict in late 2021 that the restrictive policies would kill the property sector, and cause damage to the economy. Yet it took nearly a full year for the restrictions to be lifted. Similar policy rhythm can be found in other areas such as policies on internet platform companies.

Credit bonds' bull run in 2022 ends with an abrupt crash in Nov when redemption by WMPs sent bond yields higher. Strong feedback cycle then pushes more WMPs into negative return area and induces more redemptions. A note worth taking from 2022 is that WMPs have become a huge source of volatility of bond market after they were turned into fund-like products in late 2021. It takes regulators' actions in Dec to introduce more buyers into the market in order to slow down the fire sales of credit bonds. There will be some blips before Chinese New Year holidays when people tend to cash out of their investments. However, it seems the turmoil is slowly coming to the end. From a macro perspective, the sell-down of credit bonds is equivalent to an interest hike happening at the time when the economy needs the opposite. The shoot-up of bond yields and shrinkage of net credit bonds issuance since Nov surely won't help economic recovery.

Looking into 2023, investors have to struggle between a rosy expectation and a bleak reality. Chinese equity and bond markets have both priced in the former since last Nov. It's probably time to give the latter a fair share of attention, which means a short-term retreat of both markets from their respective heights. If Covid subvariants don't evolve into worse species in 2023, Chinese economy can certainly improve because some of the policies that hurt market efficiency have been taken back. Amid the certainty, the uncertain bit is going to be the actual path of the recovery because it takes time for market sentiment to get better. Year 2023 will likely be a precursor to the next growth cycle. Our baseline scenario for 2023 is that Chinese economy will lag behind current expectation in H1, and will start to pick up towards yearend.

### ▲ Portfolio Allocation

#### Sector Exposure (%)

Weighted Avg Duration 2.90 Years

Weighted Avg Credit Ratings AAA

Weighted Avg Yield to Maturity 1.85%

Credit Products include Medium Term Notes, Convertible Bonds, Corporate Bonds, Enterprise Bonds.

Data Source: Wind. Rating agencies include Dagong, China Lianhe, Pengyuan, CCXI, CCXR, Shanghai Brilliance, China LianHe. Data As of 30 Dec 2022

Data source: Bloomberg. As of 30 December 2022.

### ▲ Latest Fund Distribution

Class	Ex-dividend Date	Distribution	Annualized Dividend Yield
Class A-DIST-RMB	Dec-29-2022	RMB 0.03	4.11%
Class A-DIST-USD	Dec-29-2022	USD 0.03	4.83%

Dividend is not guaranteed and may be paid out of capital or effectively paid out of capital.

Annualized Dividend Yield =  $[(1 + \text{distribution per unit} / \text{ex-dividend NAV})^{12}] - 1$ . The annualized dividend yield is calculated based on the latest dividend distribution with dividend reinvested, and may be higher or lower than the actual annual dividend yield. Positive distribution yield does not imply positive return.
