

# ChinaAMC Select RMB Bond Fund

## Fund Factsheet

As of 31 Jan 2023

37/F, Bank of China Tower, 1 Garden Road, Hong Kong

Investment involves risks, including the loss of principal. The price of units or shares of the Funds may go up as well as down. Past performance is not indicative of future results. The value of the Funds can be extremely volatile and could go down substantially within a short period of time. You should read the Fund's Placing Memorandum or Explanatory Memorandum and Product Key Facts Statement for details, including risk factors. Investors should not base investment decisions on this marketing material alone. Please note:

- ChinaAMC Select RMB Bond Fund (the "Fund"), through the RQFII quota obtained by the Manager, invests primarily in RMB denominated fixed income securities issued or distributed in the PRC and may invest a small portion of its assets in PRC A-Shares.
- The Fund is subject to regulations which regulate investments by RQFIIs in the PRC which have just been announced and novel in nature. Any uncertainty and change to the relevant laws and regulations (such as PRC tax laws and repatriation policy) in the PRC may adversely impact the Fund.
- Investment in single country (the PRC) markets involves concentration and other risks not typically associated with investment in more developed economies or markets.
- Investment in RMB debt instruments in the PRC involves liquidity risk, credit risk, credit rating risk and downgrade risk. There may not be a liquid or active market for such RMB debt instruments; the Fund may also be exposed to credit/insolvency risk of issuers of the debt securities. As the credit ratings of the debt instruments of the Fund are largely assigned by the credit agencies in the PRC, the methodologies adopted by such local rating agencies may not be consistent with the international rating agencies. In the event of downgrading in the credit ratings of a debt instrument or its issuer, the Fund's investment value in such security may be adversely affected.
- Investment in the Fund is subject to interest rate risk. Change of macro-economic policies in the PRC such as monetary and fiscal policy may cause changes to market interest rates, affecting the pricing of bonds and thus the return of the Fund.
- The Fund is denominated and settled in RMB; subscription and redemption must be made in RMB. RMB is not freely convertible and is subject to exchange controls and restrictions. There is no guarantee that RMB will not depreciate. HKD Investors may suffer a loss if RMB depreciates against HKD or such other currencies.

### ▲ Investment Objective

The Fund seeks to achieve capital appreciation and income generation by principally (i.e. up to 100% of its net assets) investing in (i) RMB denominated fixed income instruments, including bonds, issued or distributed within the PRC which (a) are denominated and settled in RMB and (b) are traded on the interbank bond market or are traded or transferred on the exchange market in the PRC, and (ii) fixed income funds (including money market funds) approved by the China Securities Regulatory Commission ("CSRC") and offered to the public in the PRC\*.

\* Investment in fixed income funds approved by the CSRC which are offered to the public in the PRC will not exceed 10% of the net asset value of the Fund.

## Fund Factsheet

### ▲ Manager's Comment

A holiday-shortened Jan doesn't offer much reliable information to guide the market. So does Feb in most years. Long holidays tend to make data distorted. Among a few data points released in Jan, Dec bank loans and social financing are the most important. Headline business loans appear robust. However, some argue that business loans are increasingly becoming a "shadow fiscal expenditure" because SoEs are encouraged to take out loans to work on infrastructure projects. A weak credit bond market in Dec also pushes many companies into bank loans for financing thus exaggerates total loan demands. Another note to take from the data is that household loans continue to be sluggish. Combining with the staggering accumulation of household deposit, the data point to an extremely bearish prospect held by the household. All in all, supply is easy to pump up, demand is hard.

Another round of redemption of Wealth Management Products (WMPs) in late December raises China bond yields to levels that are remarkably incompatible with current economic situation and monetary policy stance. The net macroeconomic effect of WMPs redemption since Nov is similar to that of an interest rate hike in a contracting economic environment. If one traces back the origin of the turmoil that leads to the redemption wave, one has to admit that PBoC had a misstep when abruptly tightened liquidity supply in late Oct. Apparently PBoC was struggling between two roles: executing an accommodative monetary policy and monitoring financial stability. It let the latter role have an upper hand in Oct in order to rein in financial leverage among bond investors. However it failed to see through the reaction chain in the market. PBoC's "surprise-the-market" style decision-making process doesn't help either.

Investors shall feel quite comfortable in buying credit bonds at current yields because factors are aligned in their favor: Economy will take time to recover; WMPs redemption has passed its peak; and a remorseful PBoC will not rock the boat again. Just remember not to get too long on bond duration.

### ▲ Portfolio Allocation

#### Sector Exposure (%)

Weighted Avg Duration	1.45 Years
Weighted Avg Credit Ratings	D
Weighted Avg Yield to Maturity	1.22%

Credit Products include Medium Term Notes, Convertible Bonds, Corporate Bonds, Enterprise Bonds.

Data Source: Wind. Rating agencies include Dagong, China Lianhe, Pengyuan, CCXI, CCXR, Shanghai Brilliance, China LianHe. Data As of 31 Jan 2023

### ▲ Latest Fund Distribution

Class	Ex-dividend Date	Distribution	Annualized Dividend Yield
Class A-DIST-RMB	30/1/2023	RMB 0.03	4.09%
Class A-DIST-USD	30/1/2023	USD 0.03	4.70%

Dividend is not guaranteed and may be paid out of capital or effectively paid out of capital.

Annualized Dividend Yield =  $[(1 + \text{distribution per unit} / \text{ex-dividend NAV})^{12}] - 1$ . The annualized dividend yield is calculated based on the latest dividend distribution with dividend reinvested, and may be higher or lower than the actual annual dividend yield. Positive distribution yield does not imply positive return.
