

ChinaAMC Select Greater China Technology Fund*

Fund Factsheet

As of 30 Dec 2022

37/F, Bank of China Tower, 1 Garden Road, Hong Kong

Investment involves risks, including the loss of principal. The price of units or shares of the Funds may go up as well as down. Past performance is not indicative of future results. The value of the Funds can be extremely volatile and could go down substantially within a short period of time. You should read the Fund's Placing Memorandum or Explanatory Memorandum and Product Key Facts Statement for details, including risk factors. Investors should not base investment decisions on this marketing material alone. Please note:

- ChinaAMC Select Greater China Technology Fund (the "Fund") will invest primarily in China-Related Technology Companies and in the opinion of the Manager, will likely benefit from innovations, use of new technologies or offering products and services that meet the demands of the new and evolving China economy ("China-Related Technology Companies"). The Fund may invest a small portion of its assets in fixed income securities, equities listed on stock exchanges around the world other than the Greater China, other collective investment schemes and invest directly in Mainland China securities.
- The Fund will invest in equity securities and is subject to general market risk and the prices of such securities may be volatile.
- The Fund may also invest in companies of any market capitalization including but not limited to companies with small or medium market capitalization. The stocks of companies with small or medium market capitalization may have lower liquidity and their prices are more volatile to adverse economic developments than those of larger market capitalization companies in general.
- The Fund will focus its investments on China-Related Companies and such investments will increase the Sub-Fund's vulnerability to the economic, political or regulatory or tax developments of a single country such as China. Also, the Fund is likely to be more volatile than a fund having a more diverse portfolio of investments.
- The Fund may invest in the PRC markets, which involve certain risks and special considerations not typically associated with investment in more developed economies or markets, such as greater political, tax, economic, foreign exchange, liquidity, legal and regulatory risk.
- The Fund will invest in debt investments and is subject to liquidity risk, credit risk, interest rate risk, credit rating risk, valuation risk, downgrade risk and sovereign debt risk. Generally, the prices of debt securities rise when interest rates fall, whilst their prices fall when interest rates rise.
- The Fund may invest in convertible bonds which are a hybrid between debt and equity, permitting holders to convert into shares in the company issuing the bond at a specified future date. As such, convertibles will be exposed to equity movement and greater volatility than straight bond investments. Investments in convertible bonds are subject to the same interest rate risk, credit risk, liquidity risk and prepayment risk associated with comparable straight bond investments.
- The Fund may invest the Stock Connect which may have potential retrospective effect. Where a suspension in the trading through the programme is effected, the Fund's ability to achieve its investment objective could be negatively affected.
- The Fund may invest in depositary receipts that may generate additional risks compared to a direct exposure to the underlying stocks, including the risk of non-segregation of the underlying stocks from the depositary banks' own assets and liquidity risk. These may negatively affect the performance and/or liquidity of the Fund.
- Debt instruments with loss-absorption features are subject to the risk of being written down or converted to ordinary shares upon the occurrence of certain pre-defined trigger events, which are complex and difficult to predict and may result in a significant or total reduction in the value of such instruments.
- The Fund may invest in urban investment bonds which are typically not guaranteed by Chinese central or local governments. In the event of default, the Fund could suffer substantial loss.
- Some Classes of the Fund are denominated and settled in RMB; subscription and redemption must be made in RMB. RMB is not freely convertible and is subject to exchange controls and restrictions. There is no guarantee that the value of RMB against the investor's base currencies (for example HKD) will not depreciate. Any depreciation of RMB could adversely affect the value of investors' investments in the RMB classes. Under exceptional circumstances, redemption proceeds in RMB may be delayed due to exchange controls and restrictions applicable to RMB.

▲ Investment Objective

The Fund seeks to achieve long term capital growth by primarily (i.e. not less than 70% of its Net Asset Value) investing in China-Related Technology Companies (as defined below). To achieve the investment objective, not less than 70% of the Fund's Net Asset Value will be invested in equities of technology companies which, in the opinion of the Manager, will likely benefit from innovations, use of new technologies or offering products and services that meet the demands of the new and evolving China economy ("China-Related Technology Companies") with registered offices located in the Greater China area (including Mainland China, Hong Kong, Macau and Taiwan), and/or China Related Technology Companies that do not have their registered offices in the Greater China area but either (a) carry out a predominant proportion of their business activities in Greater China or (b) are holding companies which predominantly own companies with registered offices in Greater China.

▲ Manager's Comment

The Hang Seng Technology Index continued to rebound in December, rising 8.70% for the whole month. China's economic opening up was further accelerated in December. The optimization measures of the "New Ten Measures" and the adjustment of entry and exit policies marked the final exit of China's "dynamic zeroing" epidemic prevention policy and the official start of the reopening process. Superimposed on the positive statement of the Central Economic Work Conference on private enterprises and the platform economy, investors' confidence in China's economic growth and the stock market in 2023 has increased significantly, while the government's support for private enterprises and the platform economy and the lifting of the policy of delisting of Chinese concept stocks is also conducive to the improvement of investors' risk appetite. In late December, the number of imported games was restarted after 18 months, including a head-shooting game from Tencent. Investors' concerns about the regulation of the game industry have greatly weakened, and the growth prospects of the game industry have improved significantly. In addition, industries that are highly related to the growth of the real economy, such as e-commerce and advertising, are also expected to benefit from China's reopening process. The consumer electronics and semiconductor industries are also close to the bottom of the industry's down cycle. Overall, we are more optimistic about the earnings growth and share price performance of the Greater China technology sector in 2023.

The fund's gain in December was slightly lower than that of the Hang Seng Technology Index. In view of the clearer signal of China's economic reopening, more positive industry policy trends and more optimistic profit growth prospects, the fund chose an opportunity to further increase the allocation of high-quality stocks in the Internet and technology industries among overseas Chinese stocks in December. The performance of the A-share market in December lagged behind that of the overseas Chinese stock market. The stock price performance of some long-term optimistic A-share technology companies held by the fund has a certain impact on the net value of the fund in the short term, but it is expected to improve the stability of the fund's performance in the medium and long term and diversity of income sources. Looking ahead, with the start of China's economic reopening process and the continuous introduction of policies to stabilize growth, China's economic growth, corporate profitability improvement, market uncertainty decline, investor risk appetite increase and external unfavorable factors weakening is expected to significantly improve the performance of the Chinese stock market in 2023. A faster-than-expected reopening process and greater clarity on policymakers' emphasis on economic growth will underpin corporate earnings growth bottoming out in the first quarter of 2023. Investors will also turn more attention to China's economic recovery after reopening, and assess the impact of short-term and long-term policy adjustments. The fund as a whole will adopt a more active investment strategy, but will continue to adopt strict standards in the selection of individual stocks, and strive to achieve steady growth in the net value of the fund in the medium and long term, and bring better investment experience and income performance to holders.
