

ChinaAMC Select Greater China Technology Fund*

Fund Factsheet

As of 31 Jan 2023

37/F, Bank of China Tower, 1 Garden Road, Hong Kong

Investment involves risks, including the loss of principal. The price of units or shares of the Funds may go up as well as down. Past performance is not indicative of future results. The value of the Funds can be extremely volatile and could go down substantially within a short period of time. You should read the Fund's Placing Memorandum or Explanatory Memorandum and Product Key Facts Statement for details, including risk factors. Investors should not base investment decisions on this marketing material alone. Please note:

- ChinaAMC Select Greater China Technology Fund (the "Fund") will invest primarily in China-Related Technology Companies and in the opinion of the Manager, will likely benefit from innovations, use of new technologies or offering products and services that meet the demands of the new and evolving China economy ("China-Related Technology Companies"). The Fund may invest a small portion of its assets in fixed income securities, equities listed on stock exchanges around the world other than the Greater China, other collective investment schemes and invest directly in Mainland China securities.
- The Fund will invest in equity securities and is subject to general market risk and the prices of such securities may be volatile.
- The Fund may also invest in companies of any market capitalization including but not limited to companies with small or medium market capitalization. The stocks of companies with small or medium market capitalization may have lower liquidity and their prices are more volatile to adverse economic developments than those of larger market capitalization companies in general.
- The Fund will focus its investments on China-Related Companies and such investments will increase the Sub-Fund's vulnerability to the economic, political or regulatory or tax developments of a single country such as China. Also, the Fund is likely to be more volatile than a fund having a more diverse portfolio of investments.
- The Fund may invest in the PRC markets, which involve certain risks and special considerations not typically associated with investment in more developed economies or markets, such as greater political, tax, economic, foreign exchange, liquidity, legal and regulatory risk.
- The Fund will invest in debt investments and is subject to liquidity risk, credit risk, interest rate risk, credit rating risk, valuation risk, downgrade risk and sovereign debt risk. Generally, the prices of debt securities rise when interest rates fall, whilst their prices fall when interest rates rise.
- The Fund may invest in convertible bonds which are a hybrid between debt and equity, permitting holders to convert into shares in the company issuing the bond at a specified future date. As such, convertibles will be exposed to equity movement and greater volatility than straight bond investments. Investments in convertible bonds are subject to the same interest rate risk, credit risk, liquidity risk and prepayment risk associated with comparable straight bond investments.
- The Fund may invest the Stock Connect which may have potential retrospective effect. Where a suspension in the trading through the programme is effected, the Fund's ability to achieve its investment objective could be negatively affected.
- The Fund may invest in depositary receipts that may generate additional risks compared to a direct exposure to the underlying stocks, including the risk of non-segregation of the underlying stocks from the depositary banks' own assets and liquidity risk. These may negatively affect the performance and/or liquidity of the Fund.
- Debt instruments with loss-absorption features are subject to the risk of being written down or converted to ordinary shares upon the occurrence of certain pre-defined trigger events, which are complex and difficult to predict and may result in a significant or total reduction in the value of such instruments.
- The Fund may invest in urban investment bonds which are typically not guaranteed by Chinese central or local governments. In the event of default, the Fund could suffer substantial loss.
- Some Classes of the Fund are denominated and settled in RMB; subscription and redemption must be made in RMB. RMB is not freely convertible and is subject to exchange controls and restrictions. There is no guarantee that the value of RMB against the investor's base currencies (for example HKD) will not depreciate. Any depreciation of RMB could adversely affect the value of investors' investments in the RMB classes. Under exceptional circumstances, redemption proceeds in RMB may be delayed due to exchange controls and restrictions applicable to RMB.

▲ Investment Objective

The Fund seeks to achieve long term capital growth by primarily (i.e. not less than 70% of its Net Asset Value) investing in China-Related Technology Companies (as defined below). To achieve the investment objective, not less than 70% of the Fund's Net Asset Value will be invested in equities of technology companies which, in the opinion of the Manager, will likely benefit from innovations, use of new technologies or offering products and services that meet the demands of the new and evolving China economy ("China-Related Technology Companies") with registered offices located in the Greater China area (including Mainland China, Hong Kong, Macau and Taiwan), and/or China Related Technology Companies that do not have their registered offices in the Greater China area but either (a) carry out a predominant proportion of their business activities in Greater China or (b) are holding companies which predominantly own companies with registered offices in Greater China.

Minimum Initial Subscription	HKD 10,000

ChinaAMC Select Greater China Technology Fund

Fund Factsheet

▲ Portfolio Allocation

▲ Manager's Comment

The Hang Seng Technology Index extended its rally in January, rising 10.02% for the month. An earlier and faster reopening process in China, overall better-than-expected December macro data, more optimistic expectations for China's economic recovery, a more friendly Internet regulatory policy and a more favorable external environment were the main factors driving the market higher. China has rapidly reached herd immunity status following the optimization of outbreak prevention and control measures, with about 80% of the population expected to have been infected with the new coronavirus, while data released by the CDC on infections, hospitalizations and deaths indicate that the first round of the impact of the new coronavirus is largely over following the optimization of prevention and control measures. China's macro data in December were generally better than expected, with consumption data rebounding sharply driven by growth in demand for drugs and food, fixed asset investment growth picking up moderately, and industrial production also performing better than expected in the face of the epidemic shock. Given that China is achieving herd immunity status faster than expected and that economic growth performed better than expected in the fourth quarter of 2022, most investors see greater upside risk to previous market expectations for China's economic growth in 2023, while investors are gradually developing a positive consensus on the outlook for China's macroeconomic and financial markets. The Fund outperformed the Hang Seng Technology Index in January. Although a small cash position was a drag on the Fund's performance, the Fund achieved significant positive outperformance in its stock selection in 3 key sectors: communication services, consumer discretionary, and information technology. The Fund continued to actively make investment decisions in January based on solid research and analysis in conjunction with industry and company fundamentals, achieving better results overall and further improving the Fund's overall position. Looking ahead, the Chinese economy is likely to grow faster than the market previously expected given the earlier and faster reopening process in China and the continued introduction of countercyclical easing policies. High-frequency data from the first Chinese New Year holiday following the optimization of epidemic prevention and control measures suggest that domestic economic activity is gradually shaking off the impact of the new crown epidemic, with a sharp rebound in travel and consumer demand that was previously suppressed and a better-than-expected recovery in most travel and consumption sectors. After the sharp rally over the past three months, there may be a short-term need for market shocks and consolidation given the recent increase in geo-risk disturbances. The Fund will continue its relatively aggressive investment strategy under the premise of controlling systemic risk, and strive to bring better investment experience and return performance to fund holders in the medium to long term through reasonable sector allocation and strict individual stock selection.
