## Fund Factsheet

As of 30 Apr 2023

37/F, Bank of China Tower, 1 Garden Road, Hong Kong

Investment involves risks, including the loss of principal. The price of units or shares of the Funds may go up as well as down. Past performance is not indicative of future results. The value of the Funds can be extremely volatile and could go down substantially within a short period of time. You should read the Fund's Placing Memorandum or Explanatory Memorandum and Product Key Facts Statement for details, including risk factors. Investors should not base investment decisions on this marketing material alone. Please note:

- ChinaAMC Select Greater China Technology Fund (the "Fund") will invest primarily in China-Related Technology Companies and in the opinion of the Manager, will likely benefit from innovations, use of new technologies or offering products and services that meet the demands of the new and evolving China economy ("China-Related Technology Companies"). The Fund may invest a small portion of its assets in fixed income securities, equities listed on stock exchanges around the world other than the Greater China, other collective investment schemes and invest directly in Mainland China securities.
- The Fund will invest in equity securities and is subject to general market risk and the prices of such securities may be volatile.
- The Fund may also invest in companies of any market capitalization including but not limited to companies with small or medium market capitalization. The stocks of companies with small or medium market capitalization may have lower liquidity and their prices are more volatile to adverse economic developments than those of larger market capitalization companies in general.
- The Fund will focus its investments on China-Related Companies and such investments will increase the Sub-Fund's vulnerability to the economic, political or regulatory or tax developments of a single country such as China. Also, the Fund is likely to be more volatile than a fund having a more diverse portfolio of investments.
- The Fund may invest in the PRC markets, which involve certain risks and special considerations not typically associated with investment in more developed economies or markets, such as greater political, tax, economic, foreign exchange, liquidity, legal and regulatory risk.
- The Fund will invest in debt investments and is subject to liquidity risk, credit risk, interest rate risk, credit rating risk, valuation risk, downgrade risk and sovereign debt risk. Generally, the prices of debt securities rise when interest rates fall, whilst their prices fall when interest rates rise.
- The Fund may invest in convertible bonds which are a hybrid between debt and equity, permitting holders to convert into shares in the company issuing the bond at a specified future date. As such, convertibles will be exposed to equity movement and greater volatility than straight bond investments. Investments in convertible bonds are subject to the same interest rate risk, credit risk, liquidity risk and prepayment risk associated with comparable straight bond investments.
- The Fund may invest the Stock Connect which may have potential retrospective effect. Where a suspension in the trading through the programme is effected, the Fund's ability to achieve its investment objective could be negatively affected.
- The Fund may invest in depositary receipts that may generate additional risks compared to a direct exposure to the underlying stocks, including the risk of non-segregation of the underlying stocks from the depositary banks' own assets and liquidity risk. These may negatively affect the performance and/or liquidity of the Fund.
- Debt instruments with loss-absorption features are subject to the risk of being written down or converted to ordinary shares upon the occurrence of certain pre-defined trigger events, which are complex and difficult to predict and may result in a significant or total reduction in the value of such instruments.
- The Fund may invest in urban investment bonds which are typically not guaranteed by Chinese central or local governments. In the event of default, the Fund could suffer substantial loss.
- Some Classes of the Fund are denominated and settled in RMB; subscription and redemption must be made in RMB. RMB is not freely convertible and is subject to exchange controls and restrictions. There is no guarantee that the value of RMB against the investor's base currencies (for example HKD) will not depreciate. Any depreciation of RMB could adversely affect the value of investors' investments in the RMB classes. Under exceptional circumstances, redemption proceeds in RMB may be delayed due to exchange controls and restrictions applicable to RMB.

### ▲ Investment Objective

The Fund seeks to achieve long term capital growth by primarily (i.e. not less than 70% of its Net Asset Value) investing in China-Related Technology Companies (as defined below). To achieve the investment objective, not less than 70% of the Fund's Net Asset Value will be invested in equities of technology companies which, in the opinion of the Manager, will likely benefit from innovations, use of new technologies or offering products and services that meet the demands of the new and evolving China economy ("China-Related Technology Companies") with registered offices located in the Greater China area (including Mainland China, Hong Kong, Macau and Taiwan), and/or China Related Technology Companies that do not have their registered offices in the Greater China area but either (a) carry out a predominant proportion of their business activities in Greater China or (b) are holding companies which predominantly own companies with registered offices in Greater China.

## Fund Factsheet

### ▲ Portfolio Allocation

#### Sector Exposure (%)

#### Geographical Exposure (%)

### ▲ Manager's Comment

The Hang Seng Tech Index fell by 9.35% in April, due to the US-China tensions and investors' skepticism over the sustainability of China's economic recovery. Bloomberg reported that US President Biden is about to sign an executive order restricting US direct investment in certain high-tech fields in China, which is actually a continuation and moderated version of last year's and February's discussions, but has caused a significant negative reaction in China's stock market. China's 1Q GDP and other macro data indicate a strong economic recovery driven by the reopening of the economy and policy support. However, investors have not reached a consensus on the sustainability and strength of China's economic recovery, especially given the weakened high-frequency economic data since April. The Politburo meeting in April continued the policy stance of "stable growth" and pledged to accelerate the "construction of a modern industrial system", increase support for new energy vehicles and artificial intelligence, and enhance China's "independent capabilities" in the technology sector. Meanwhile, the statement pointed out that the 1Q economic data in China was better than expected, but also mentioned that "demand is still insufficient" and "significant difficulties and challenges need to be overcome" to promote high-quality development. In addition, the meeting mentioned promoting the healthy development of platform enterprises and encouraging leading platform enterprises to explore innovation.

The fund outperformed the Hang Seng Tech Index in April. Positive excess returns were achieved through stock selection in the communication services and optional consumer industries, and industry allocation in healthcare and industrial sectors. Small negative excess returns were recorded in the information technology and real estate industries. The fund will continue to adhere to a prudent and sustainable investment philosophy, striving to achieve better performance over the medium to long term through reasonable industry allocation and bottom-up stock selection. Looking ahead, although China's manufacturing PMI fell into contraction territory in April and the service PMI showed a slight decline after a rapid recovery in February and March, the tourism industry rebounded strongly during the May Day holiday, with domestic tourists and tourism revenue both exceeding the levels of the same period in 2019. The overall geopolitical risk is showing a moderate trend, and recent speeches by Yellen and Sullivan suggest that the Biden administration is adopting a more moderate strategy, possibly to reduce economic risks in an election year. Yellen's upcoming visit to China may further confirm the trend of easing geopolitical risks. The Federal Reserve's decision to raise interest rates by 25 basis points and hint at a pause in the hiking cycle may ease the outflow pressure faced by China's stock market. The previous decline in the stock prices of major Internet and technology companies was more influenced by risk appetite and fund flows, and we expect that the 1Q earnings soon to be disclosed by the vast majority of Internet companies will be better than market expectations, which may have a positive impact on investor sentiment and stock performance.
