

ChinaAMC Select Greater China Technology Fund*

Fund Factsheet

As of 29 Dec 2023

37/F, Bank of China Tower, 1 Garden Road, Hong Kong

Investment involves risks, including the loss of principal. The price of units or shares of the Funds may go up as well as down. Past performance is not indicative of future results. The value of the Funds can be extremely volatile and could go down substantially within a short period of time. You should read the Fund's Placing Memorandum or Explanatory Memorandum and Product Key Facts Statement for details, including risk factors. Investors should not base investment decisions on this marketing material alone. Please note:

- ChinaAMC Select Greater China Technology Fund (the "Fund") will invest primarily in China-Related Technology Companies and in the opinion of the Manager, will likely benefit from innovations, use of new technologies or offering products and services that meet the demands of the new and evolving China economy ("China-Related Technology Companies"). The Fund may invest a small portion of its assets in fixed income securities, equities listed on stock exchanges around the world other than the Greater China, other collective investment schemes and invest directly in Mainland China securities.
- The Fund will invest in equity securities and is subject to general market risk and the prices of such securities may be volatile.
- The Fund may also invest in companies of any market capitalization including but not limited to companies with small or medium market capitalization. The stocks of companies with small or medium market capitalization may have lower liquidity and their prices are more volatile to adverse economic developments than those of larger market capitalization companies in general.
- The Fund will focus its investments on China-Related Companies and such investments will increase the Sub-Fund's vulnerability to the economic, political or regulatory or tax developments of a single country such as China. Also, the Fund is likely to be more volatile than a fund having a more diverse portfolio of investments.
- The Fund may invest in the PRC markets, which involve certain risks and special considerations not typically associated with investment in more developed economies or markets, such as greater political, tax, economic, foreign exchange, liquidity, legal and regulatory risk.
- The Fund will invest in debt investments and is subject to liquidity risk, credit risk, interest rate risk, credit rating risk, valuation risk, downgrade risk and sovereign debt risk. Generally, the prices of debt securities rise when interest rates fall, whilst their prices fall when interest rates rise.
- The Fund may invest in convertible bonds which are a hybrid between debt and equity, permitting holders to convert into shares in the company issuing the bond at a specified future date. As such, convertibles will be exposed to equity movement and greater volatility than straight bond investments. Investments in convertible bonds are subject to the same interest rate risk, credit risk, liquidity risk and prepayment risk associated with comparable straight bond investments.
- The Fund may invest the Stock Connect which may have potential retrospective effect. Where a suspension in the trading through the programme is effected, the Fund's ability to achieve its investment objective could be negatively affected.
- The Fund may invest in depositary receipts that may generate additional risks compared to a direct exposure to the underlying stocks, including the risk of non-segregation of the underlying stocks from the depositary banks' own assets and liquidity risk. These may negatively affect the performance and/or liquidity of the Fund.
- Debt instruments with loss-absorption features are subject to the risk of being written down or converted to ordinary shares upon the occurrence of certain pre-defined trigger events, which are complex and difficult to predict and may result in a significant or total reduction in the value of such instruments.
- The Fund may invest in urban investment bonds which are typically not guaranteed by Chinese central or local governments. In the event of default, the Fund could suffer substantial loss.
- Some Classes of the Fund are denominated and settled in RMB; subscription and redemption must be made in RMB. RMB is not freely convertible and is subject to exchange controls and restrictions. There is no guarantee that the value of RMB against the investor's base currencies (for example HKD) will not depreciate. Any depreciation of RMB could adversely affect the value of investors' investments in the RMB classes. Under exceptional circumstances, redemption proceeds in RMB may be delayed due to exchange controls and restrictions applicable to RMB.

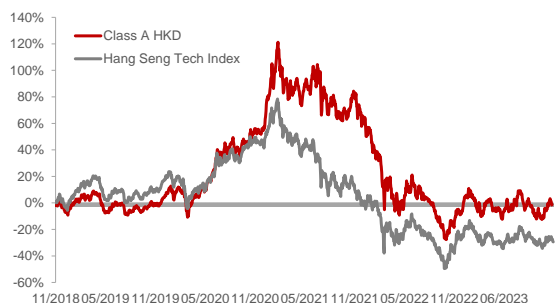

▲ Investment Objective

The Fund seeks to achieve long term capital growth by primarily (i.e. not less than 70% of its Net Asset Value) investing in China-Related Technology Companies (as defined below). To achieve the investment objective, not less than 70% of the Fund's Net Asset Value will be invested in equities of technology companies which, in the opinion of the Manager, will likely benefit from innovations, use of new technologies or offering products and services that meet the demands of the new and evolving China economy ("China-Related Technology Companies") with registered offices located in the Greater China area (including Mainland China, Hong Kong, Macau and Taiwan), and/or China Related Technology Companies that do not have their registered offices in the Greater China area but either (a) carry out a predominant proportion of their business activities in Greater China or (b) are holding companies which predominantly own companies with registered offices in Greater China.

▲ Manager's Comment

The Hang Seng Tech Index fell 3.36% in December. Overall, external factors continued to improve, with the US core PCE price index for November growing by 3.2% year-on-year, lower than the previous value of 3.5% and the expected value of 3.3%, reaching the lowest level since April 2021. The cooling inflation data may strengthen expectations of a rate cut by the Federal Reserve next year. The US dollar index and US bond yields continued to decline, which had a positive impact on the performance of major global risk assets.

However, China's economic data for November indicated that domestic demand remains relatively weak. Although the year-on-year growth rates of major economic indicators have improved, the month-on-month data, adjusted for base effects, showed a weakening economy, indicating that demand still needs further recovery. On December 14th, Beijing and Shanghai successively adjusted the standards for ordinary housing and optimized differentiated housing credit policies, which helped stabilize market expectations. However, the improvement in transactions after the implementation of relaxed real estate policies in Beijing and Shanghai was relatively weak based on short-term data. While policies helped stabilize transaction volumes in the short term, they were unable to reverse the downward trend in prices. Therefore, the progress of real estate sales and policies will still need to be observed.

According to a report by Morgan Stanley, global long-only funds net sold a total of \$3.8 billion from mainland China and Hong Kong stock markets in December 2023, marking the largest monthly net selling record in 2023. Short-term investors still have a low-risk appetite and require clearer policies for stable growth and signals of economic recovery.

The fund outperformed the Hang Seng Tech Index in December. The fund achieved positive excess returns in stock selection in the communication services, consumer discretionary, and information technology sectors. In terms of sector allocation, positive excess returns were recorded in communication services, healthcare, consumer discretionary, and financials, while slight negative excess returns were seen in information technology and consumer staples. The fund will continue to adhere to a prudent and sustainable investment philosophy, striving for good long-term performance through reasonable sector allocation and bottom-up stock selection.

Looking ahead, the current valuation of the Chinese stock market is at a historical low, indicating significant room for valuation recovery. In terms of the external environment, the rate hike cycle in developed economies overseas is essentially ending, and external liquidity in the Chinese stock market is expected to improve significantly. The pressure of foreign capital outflows from the Chinese stock market is likely to have passed its peak. However, considering base effects, credit and corporate profit growth in the first quarter of 2024 may face some pressure, and investors may find it difficult to form consistent optimistic expectations in the short term, leading to market volatility at the bottom. The situation of new construction and real estate sales after the Chinese New Year should be closely monitored, and the market may experience a significant valuation recovery rally after more positive signals of economic growth emerge. The fund will continue to adopt a relatively proactive investment strategy and strengthen the grasp of alpha opportunities at the individual stock level in a complex market environment.
