

# ChinaAMC Select Greater China Technology Fund\*

## Fund Factsheet

As of 28 Jun 2024

37/F, Bank of China Tower, 1 Garden Road, Hong Kong

Investment involves risks, including the loss of principal. The price of units or shares of the Funds may go up as well as down. Past performance is not indicative of future results. The value of the Funds can be extremely volatile and could go down substantially within a short period of time. You should read the Fund's Placing Memorandum or Explanatory Memorandum and Product Key Facts Statement for details, including risk factors. Investors should not base investment decisions on this marketing material alone. Please note:

- ChinaAMC Select Greater China Technology Fund (the "Fund") will invest primarily in China-Related Technology Companies and in the opinion of the Manager, will likely benefit from innovations, use of new technologies or offering products and services that meet the demands of the new and evolving China economy ("China-Related Technology Companies"). The Fund may invest a small portion of its assets in fixed income securities, equities listed on stock exchanges around the world other than the Greater China, other collective investment schemes and invest directly in Mainland China securities.
- The Fund will invest in equity securities and is subject to general market risk and the prices of such securities may be volatile.
- The Fund may also invest in companies of any market capitalization including but not limited to companies with small or medium market capitalization. The stocks of companies with small or medium market capitalization may have lower liquidity and their prices are more volatile to adverse economic developments than those of larger market capitalization companies in general.
- The Fund will focus its investments on China-Related Companies and such investments will increase the Sub-Fund's vulnerability to the economic, political or regulatory or tax developments of a single country such as China. Also, the Fund is likely to be more volatile than a fund having a more diverse portfolio of investments.
- The Fund may invest in the PRC markets, which involve certain risks and special considerations not typically associated with investment in more developed economies or markets, such as greater political, tax, economic, foreign exchange, liquidity, legal and regulatory risk.
- The Fund will invest in debt investments and is subject to liquidity risk, credit risk, interest rate risk, credit rating risk, valuation risk, downgrade risk and sovereign debt risk. Generally, the prices of debt securities rise when interest rates fall, whilst their prices fall when interest rates rise.
- The Fund may invest in convertible bonds which are a hybrid between debt and equity, permitting holders to convert into shares in the company issuing the bond at a specified future date. As such, convertibles will be exposed to equity movement and greater volatility than straight bond investments. Investments in convertible bonds are subject to the same interest rate risk, credit risk, liquidity risk and prepayment risk associated with comparable straight bond investments.
- The Fund may invest the Stock Connect which may have potential retrospective effect. Where a suspension in the trading through the programme is effected, the Fund's ability to achieve its investment objective could be negatively affected.
- The Fund may invest in depositary receipts that may generate additional risks compared to a direct exposure to the underlying stocks, including the risk of non-segregation of the underlying stocks from the depositary banks' own assets and liquidity risk. These may negatively affect the performance and/or liquidity of the Fund.
- Debt instruments with loss-absorption features are subject to the risk of being written down or converted to ordinary shares upon the occurrence of certain pre-defined trigger events, which are complex and difficult to predict and may result in a significant or total reduction in the value of such instruments.
- The Fund may invest in urban investment bonds which are typically not guaranteed by Chinese central or local governments. In the event of default, the Fund could suffer substantial loss.
- Some Classes of the Fund are denominated and settled in RMB; subscription and redemption must be made in RMB. RMB is not freely convertible and is subject to exchange controls and restrictions. There is no guarantee that the value of RMB against the investor's base currencies (for example HKD) will not depreciate. Any depreciation of RMB could adversely affect the value of investors' investments in the RMB classes. Under exceptional circumstances, redemption proceeds in RMB may be delayed due to exchange controls and restrictions applicable to RMB.

### ▲ Investment Objective

The Fund seeks to achieve long term capital growth by primarily (i.e. not less than 70% of its Net Asset Value) investing in China-Related Technology Companies (as defined below). To achieve the investment objective, not less than 70% of the Fund's Net Asset Value will be invested in equities of technology companies which, in the opinion of the Manager, will likely benefit from innovations, use of new technologies or offering products and services that meet the demands of the new and evolving China economy ("China-Related Technology Companies") with registered offices located in the Greater China area (including Mainland China, Hong Kong, Macau and Taiwan), and/or China Related Technology Companies that do not have their registered offices in the Greater China area but either (a) carry out a predominant proportion of their business activities in Greater China or (b) are holding companies which predominantly own companies with registered offices in Greater China.

## Fund Factsheet

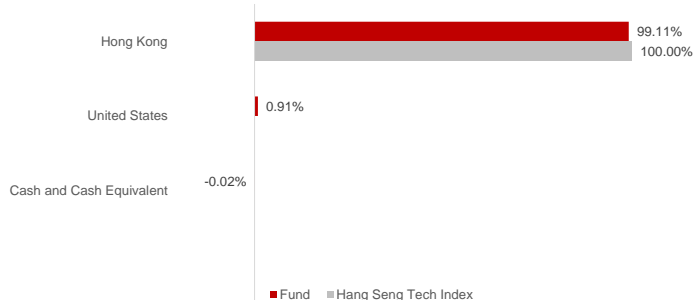

### ▲ Portfolio Allocation

#### Sector Exposure (%)

#### Geographical Exposure (%)

### ▲ Manager's Comment

In June, the Hang Seng Tech Index in Hong Kong fell by 3.69%. The market experienced a downward trend throughout the month, with most high-frequency economic data weakening. Investors became more cautious about economic growth expectations, and coupled with the depreciation of the Chinese yuan against the US dollar, market risk appetite significantly declined.

On June 25, Premier Li Qiang attended the opening ceremony of the 2024 Summer Davos Forum and emphasized the need to always grasp the direction of building an open world economy. He highlighted the importance of consolidating the foundation and enhancing the basic support capabilities for economic development. He also mentioned the need to combine short-term and long-term measures to promote high-quality development.

On June 26, the State Council Information Office held a regular policy briefing, where they proposed the formation of a comprehensive system to support the high-quality development of entrepreneurial investment. They aimed to guide long-term funds such as insurance funds to invest in entrepreneurial ventures and create a more favorable market environment for entrepreneurial investment. On the same day, Premier Li Qiang presided over an executive meeting of the State Council, where they discussed utilizing foreign investment. They emphasized the deepening of opening up in key areas, implementing the "zero restrictions" on foreign access in the manufacturing sector, and launching a new round of pilot measures for the expansion of the service industry.

On June 27, the Politburo of the Communist Party of China held a meeting to discuss further comprehensive deepening of reforms and the advancement of China's modernization. They also decided to convene the third plenary session of the 20th Central Committee of the Communist Party of China from July 15 to 18 in Beijing.

Looking ahead, investment managers maintain a positive outlook on the market's medium to long-term performance. After the implementation of the new real estate policies on May 17, real estate sales in major first-tier cities have shown signs of recovery, but the sustainability is still to be observed. Some internet and consumer companies have faced short-term pressure on profit growth due to weather factors and macroeconomic pressures, resulting in weaker stock price trends. However, undervalued stocks and gradually improving shareholder return measures are expected to provide support to stock prices. The commercialization progress of Apple's AI products has sparked investors' enthusiasm for edge AI, benefiting semiconductor and consumer electronics-related companies. The upcoming Third Plenum and the end-of-July Politburo meeting on economic and policy matters will be the short-term focus of the market. It is expected that the market will continue to trade within a range, and investment managers will actively seize investment opportunities at the individual stock level. Funds will continue to adopt a relatively proactive investment strategy while enhancing the capture of alpha opportunities at the individual stock level to improve the diversity and stability of portfolio investment returns.
