

# ChinaAMC Select Greater China Technology Fund\*

Fund Factsheet | As of 28 Feb 2025

Investment involves risks, including the loss of principal. The price of units or shares of the Funds may go up as well as down. Past performance is not indicative of future results. The value of the Funds can be extremely volatile and could go down substantially within a short period of time. You should read the Fund's Placing Memorandum or Explanatory Memorandum and Product Key Facts Statement for details, including risk factors. Investors should not base investment decisions on this marketing material alone. Please note:

- ChinaAMC Select Greater China Technology Fund (the "Fund") will invest primarily in China-Related Technology Companies and in the opinion of the Manager, will likely benefit from innovations, use of new technologies or offering products and services that meet the demands of the new and evolving China economy ("China-Related Technology Companies"). The Fund may invest a small portion of its assets in fixed income securities, equities listed on stock exchanges around the world other than the Greater China, other collective investment schemes and invest directly in Mainland China securities.
- The Fund will invest in equity securities and is subject to general market risk and the prices of such securities may be volatile.
- The Fund may also invest in companies of any market capitalization including but not limited to companies with small or medium market capitalization. The stocks of companies with small or medium market capitalization may have lower liquidity and their prices are more volatile to adverse economic developments than those of larger market capitalization companies in general.
- The Fund will focus its investments on China-Related Companies and such investments will increase the Sub-Fund's vulnerability to the economic, political or regulatory or tax developments of a single country such as China. Also, the Fund is likely to be more volatile than a fund having a more diverse portfolio of investments.
- The Fund may invest in the PRC markets, which involve certain risks and special considerations not typically associated with investment in more developed economies or markets, such as greater political, tax, economic, foreign exchange, liquidity, legal and regulatory risk.
- The Fund will invest in debt investments and is subject to liquidity risk, credit risk, interest rate risk, credit rating risk, valuation risk, downgrade risk and sovereign debt risk. Generally, the prices of debt securities rise when interest rates fall, whilst their prices fall when interest rates rise.
- The Fund may invest in convertible bonds which are a hybrid between debt and equity, permitting holders to convert into shares in the company issuing the bond at a specified future date. As such, convertibles will be exposed to equity movement and greater volatility than straight bond investments. Investments in convertible bonds are subject to the same interest rate risk, credit risk, liquidity risk and prepayment risk associated with comparable straight bond investments.
- The Fund may invest the Stock Connect which may have potential retrospective effect. Where a suspension in the trading through the programme is effected, the Fund's ability to achieve its investment objective could be negatively affected
- The Fund may invest in depositary receipts that may generate additional risks compared to a direct exposure to the underlying stocks, including the risk of non-segregation of the underlying stocks from the depositary banks' own assets and liquidity risk. These may negatively affect the performance and/or liquidity of the Fund.
- Debt instruments with loss-absorption features are subject to the risk of being written down or converted to ordinary shares upon the occurrence of certain pre-defined trigger events, which are complex and difficult to predict and may result in a significant or total reduction in the value of such instruments.
- The Fund may invest in urban investment bonds which are typically not guaranteed by Chinese central or local governments. In the event of default, the Fund could suffer substantial loss.
- Some Classes of the Fund are denominated and settled in RMB; subscription and redemption must be made in RMB. RMB is not freely convertible and is subject to exchange controls and restrictions. There is no guarantee that the value of RMB against the investor's base currencies (for example HKD) will not depreciate. Any depreciation of RMB could adversely affect the value of investors' investments in the RMB classes. Under exceptional circumstances, redemption proceeds in RMB may be delayed due to exchange controls and restrictions applicable to RMB.

## Investment Objective

The Fund seeks to achieve long term capital growth by primarily (i.e. not less than 70% of its Net Asset Value) investing in China-Related Technology Companies (as defined below). To achieve the investment objective, not less than 70% of the Fund's Net Asset Value will be invested in equities of technology companies which, in the opinion of the Manager, will likely benefit from innovations, use of new technologies or offering products and services that meet the demands of the new and evolving China economy ("China-Related Technology Companies") with registered offices located in the Greater China area (including Mainland China, Hong Kong, Macau and Taiwan), and/or China Related Technology Companies that do not have their registered offices in the Greater China area but either (a) carry out a predominant proportion of their business activities in Greater China or (b) are holding companies which predominantly own companies with registered offices in Greater China.

Fund Factsheet | As of 28 Feb 2025

## ▲ Manager's Comment

In February, the Hang Seng Tech Index rose by 17.88%. On February 9th, China's January CPI increased by 0.5% year-on-year, mainly driven by the Spring Festival effect boosting service consumption recovery. However, the performance of food items was weaker than seasonal trends, indicating that the foundation for domestic demand repair still needs to be consolidated. On February 10th, Premier Li Keqiang presided over an executive meeting of the State Council, emphasizing the promotion of upgrading bulk consumption, increasing support for consumer goods replacement, better meeting housing consumption demands, supporting the accelerated development of new types of consumption, promoting "AI + consumption," health consumption, and implementing comprehensive removal of foreign investment access restrictions in the manufacturing sector. On February 12th, according to Bloomberg, insiders revealed that the central government is formulating a proposal to help Vanke Corporation fill a funding gap of about 50 billion RMB this year. Regulatory authorities will allocate 20 billion RMB of local government special bonds to be used for the acquisition of Vanke's existing properties and vacant land, leading to a significant increase in real estate stocks. On February 17th, a forum for private enterprises was convened by the central government, emphasizing that "private economy is the main force driving China's modernization." Measures were proposed to accelerate the legislation of the "Private Economy Promotion Law," optimize tax policies, streamline administrative approval processes, etc. Participating enterprises covered new productive sectors like new energy, the internet, and semiconductors. Policies were focused on AI, high-end manufacturing, and other directions, which are expected to boost investments in the technology and internet sectors.

Looking ahead, investment managers maintain a positive view on the market's mid-to-long-term performance, as the market expands from TMT towards other directions such as pro-cyclical sectors. The recent surge in Hong Kong stocks was primarily driven by valuation expansion. The forward P/E ratio of the Hang Seng Index has basically returned to the central range of historical valuations. Short-term market valuations are approaching rational levels, with continued inflows of funds from the mainland and increased foreign long-term allocations to Chinese equities expected to provide ongoing support to the market. China's economic growth at the beginning of the year met expectations. The pace and intensity of policy announcements during the "Two Sessions" were relatively stable. The subsequent deployment of incremental policies will largely depend on external pressures. In terms of industrial policies, the "Two Sessions" proposed to promote the integrated development of technological innovation and industrial innovation, support the widespread application of large-scale models, vigorously develop new-generation intelligent terminals such as smart grid-connected new energy vehicles, AI smartphones and computers, smart robots, while emphasizing the healthy development of platform economies to better leverage their positive role in stabilizing employment and expanding consumption. Future focus will continue on the sustainability of AI and smart driving themes, post-holiday consumption trends, new construction starts, and the pace of implementing incremental stimulus measures. Funds will continue to adopt a relatively proactive investment strategy, while also enhancing the capture of alpha opportunities at the individual stock level in the complex market environment, enhancing the diversity and stability of portfolio investment returns.
